Gene Summary:This gene encodes an assembly factor protein which helps in the assembly and stabilization
of Complex I, a large multi-subunit enzyme in the mitochondrial respiratory chain. Complex I
is involved in several physiological activities in the cell, including metabolite transport and
ATP synthesis. The encoded protein is a methyltransferase which methylates Arg85 of a
subunit of Complex I in the early stages of its assembly. A pseudogene related to this gene is
located on chromosome 8. Alternative splicing results in multiple transcript variants.
