| Product Type:                | Expression Plasmids  |
|------------------------------|--|
| Product Name:                | RET (NM_020630) Human Tagged Lenti ORF Clone                                     |
| Tag:                         | Myc-DDK  |
| Symbol:                      | RET  |
| Synonyms:                    | CDHF12; CDHR16; HSCR1; MEN2A; MEN2B; MTC1; PTC; RET-ELE1                         |
| Mammalian Cell<br>Selection: | None   |
| Vector:                      | pLenti-C-Myc-DDK (PS100064)  |
| E. coli Selection:           | Chloramphenicol (34 ug/mL)   |
| ORF Nucleotide<br>Sequence:  | The ORF insert of this clone is exactly the same as(RC202552).                   |
| <b>Restriction Sites:</b>    | Sgfl-Mlul  |
| Cloning Scheme:              |  |
| -                            | Cloning sites used for ORF Shuttling:  |
|                              | Sgf I         ORF         Mlu I            GCG ATC GC         ATG // NNŇ ACG CGT |
|                              |  |

\* The last codon before the stop codon of the c

ACCN: ORF Size: NM\_020630 3216 bp

| <b>GRIGENE</b> RET (NM_020630) Human Tagged Lenti ORF Clone – RC202552L1 |   |
|--|---|
| OTI Disclaimer:  | The molecular sequence of this clone aligns with the gene accession number as a point of reference only. However, individual transcript sequences of the same gene can differ through naturally occurring variations (e.g. polymorphisms), each with its own valid existence. This clone is substantially in agreement with the reference, but a complete review of all prevailing variants is recommended prior to use. <u>More info</u>   |
| OTI Annotation:  | This clone was engineered to express the complete ORF with an expression tag. Expression varies depending on the nature of the gene.  |
| Components:  | The ORF clone is ion-exchange column purified and shipped in a 2D barcoded Matrix tube containing 10ug of transfection-ready, dried plasmid DNA (reconstitute with 100 ul of water).  |
| Reconstitution Method:   | <ol> <li>Centrifuge at 5,000xg for 5min.</li> <li>Carefully open the tube and add 100ul of sterile water to dissolve the DNA.</li> <li>Close the tube and incubate for 10 minutes at room temperature.</li> <li>Briefly vortex the tube and then do a quick spin (less than 5000xg) to concentrate the liquid at the bottom.</li> <li>Store the suspended plasmid at -20°C. The DNA is stable for at least one year from date of shipping when stored at -20°C.</li> </ol>  |
| RefSeq:  | <u>NM 020630.4</u>  |
| RefSeq Size:   | 4174 bp   |
| RefSeq ORF:  | 3219 bp   |
| Locus ID:  | 5979  |
| UniProt ID:  | <u>P07949</u>   |
| Cytogenetics:  | 10q11.21  |
| Protein Families:  | Druggable Genome, Protein Kinase, Transmembrane   |
| Protein Pathways:  | Endocytosis, Pathways in cancer, Thyroid cancer   |
| MW:  | 119.8 kDa   |
| Gene Summary:  | This gene encodes a transmembrane receptor and member of the tyrosine protein kinase<br>family of proteins. Binding of ligands such as GDNF (glial cell-line derived neurotrophic factor)<br>and other related proteins to the encoded receptor stimulates receptor dimerization and<br>activation of downstream signaling pathways that play a role in cell differentiation, growth,<br>migration and survival. The encoded receptor is important in development of the nervous<br>system, and the development of organs and tissues derived from the neural crest. This proto-<br>oncogene can undergo oncogenic activation through both cytogenetic rearrangement and<br>activating point mutations. Mutations in this gene are associated with Hirschsprung disease<br>and central hypoventilation syndrome and have been identified in patients with renal<br>agenesis. [provided by RefSeq, Sep 2017] |
