| Product Type:                | Expression Plasmids   |
|------------------------------|---|
| Product Name:                | IGFBP2 (NM_000597) Human Tagged Lenti ORF Clone   |
| Tag:                         | mGFP  |
| Symbol:                      | IGFBP2  |
| Synonyms:                    | IBP2; IGF-BP53  |
| Mammalian Cell<br>Selection: | Puromycin   |
| Vector:                      | pLenti-C-mGFP-P2A-Puro (PS100093)   |
| E. coli Selection:           | Chloramphenicol (34 ug/mL)  |
| ORF Nucleotide<br>Sequence:  | The ORF insert of this clone is exactly the same as(RC202573).                            |
| <b>Restriction Sites:</b>    | Sgfl-Mlul   |
| Cloning Scheme:              |   |
|                              | Cloning sites used for ORF Shuttling:   |
|                              | Sgf I         ORF         Miu I            GCG ATC GC         ATG / / NNN         ACG CGT |

ACCN: ORF Size: NM\_000597 984 bp

| GFBP2 (NM_000597) Human Tagged Lenti ORF Clone – RC202573L4 |   |
|---|---|
| OTI Disclaimer:   | Due to the inherent nature of this plasmid, standard methods to replicate additional amounts of DNA in E. coli are highly likely to result in mutations and/or rearrangements. Therefore, OriGene does not guarantee the capability to replicate this plasmid DNA. Additional amounts of DNA can be purchased from OriGene with batch-specific, full-sequence verification at a reduced cost. Please contact our customer care team at <u>custsupport@origene.com</u> or by calling 301.340.3188 option 3 for pricing and delivery. |
|   | The molecular sequence of this clone aligns with the gene accession number as a point of reference only. However, individual transcript sequences of the same gene can differ through naturally occurring variations (e.g. polymorphisms), each with its own valid existence. This clone is substantially in agreement with the reference, but a complete review of all prevailing variants is recommended prior to use. <u>More info</u>   |
| OTI Annotation:   | This clone was engineered to express the complete ORF with an expression tag. Expression varies depending on the nature of the gene.  |
| Components:   | The ORF clone is ion-exchange column purified and shipped in a 2D barcoded Matrix tube containing 10ug of transfection-ready, dried plasmid DNA (reconstitute with 100 ul of water).  |
| Reconstitution Method:                                      | <ol> <li>Centrifuge at 5,000xg for 5min.</li> <li>Carefully open the tube and add 100ul of sterile water to dissolve the DNA.</li> <li>Close the tube and incubate for 10 minutes at room temperature.</li> <li>Briefly vortex the tube and then do a quick spin (less than 5000xg) to concentrate the liquid at the bottom.</li> <li>Store the suspended plasmid at -20°C. The DNA is stable for at least one year from date of shipping when stored at -20°C.</li> </ol>  |
| RefSeq:   | <u>NM 000597.2, NP 000588.2</u>   |
| RefSeq Size:  | 1439 bp   |
| RefSeq ORF:   | 978 bp  |
| Locus ID:   | 3485  |
| UniProt ID:   | <u>P18065</u>   |
| Cytogenetics:   | 2q35  |
| Domains:  | thyroglobulin_1, IB   |
| Protein Families:   | Adult stem cells, Druggable Genome, Embryonic stem cells, ES Cell Differentiation/IPS,<br>Secreted Protein  |
| MW:   | 35 kDa  |

## GRIGENE IGFBP2 (NM\_000597) Human Tagged Lenti ORF Clone – RC202573L4

Gene Summary:The protein encoded by this gene is one of six similar proteins that bind insulin-like growth<br/>factors I and II (IGF-I and IGF-II). The encoded protein can be secreted into the bloodstream,<br/>where it binds IGF-I and IGF-II with high affinity, or it can remain intracellular, interacting with<br/>many different ligands. High expression levels of this protein promote the growth of several<br/>types of tumors and may be predictive of the chances of recovery of the patient. Several<br/>transcript variants, one encoding a secreted isoform and the others encoding nonsecreted<br/>isoforms, have been found for this gene. [provided by RefSeq, Sep 2015]
