Kallikrein 2 (KLK2) (NM 005551) Human Tagged ORF Clone Lentiviral Particle

Product data:

Product Type: Lentiviral Particles

Product Name: Kallikrein 2 (KLK2) (NM_005551) Human Tagged ORF Clone Lentiviral Particle

Symbol: Kallikrein 2

Synonyms: hGK-1; hK2; KLK2A2

Mammalian Cell

Selection:

Puromycin

Vector: pLenti-C-mGFP-P2A-Puro (PS100093)

Tag: mGFP

ACCN: NM_005551

ORF Size: 783 bp

ORF Nucleotide

The ORF insert of this clone is exactly the same as(RC202667).

Sequence:
OTI Disclaimer:

Domains:

The molecular sequence of this clone aligns with the gene accession number as a point of reference only. However, individual transcript sequences of the same gene can differ through naturally occurring variations (e.g. polymorphisms), each with its own valid existence. This clone is substantially in agreement with the reference, but a complete review of all prevailing

variants is recommended prior to use. More info

OTI Annotation: This clone was engineered to express the complete ORF with an expression tag. Expression

varies depending on the nature of the gene.

RefSeg: NM 005551.3

 RefSeq Size:
 2855 bp

 RefSeq ORF:
 786 bp

 Locus ID:
 3817

 UniProt ID:
 P20151

 Cytogenetics:
 19q13.33

Protein Families: Druggable Genome, Protease

Tryp_SPc

MW: 28.7 kDa

Gene Summary:

This gene encodes a member of the grandular kallikrein protein family. Kallikreins are a subgroup of serine proteases that are clustered on chromosome 19. Members of this family are involved in a diverse array of biological functions. The protein encoded by this gene is a highly active trypsin-like serine protease that selectively cleaves at arginine residues. This protein is primarily expressed in prostatic tissue and is responsible for cleaving pro-prostate-specific antigen into its enzymatically active form. This gene is highly expressed in prostate tumor cells and may be a prognostic maker for prostate cancer risk. Alternate splicing results in both coding and non-coding transcript variants. [provided by RefSeq, Jan 2012]
