## Apc10 (ANAPC10) (NM\_014885) Human Tagged ORF Clone Lentiviral Particle

**Product data:** 

**Product Type:** Lentiviral Particles

Product Name: Apc10 (ANAPC10) (NM\_014885) Human Tagged ORF Clone Lentiviral Particle

Symbol: Apc10

Synonyms: APC10; DOC1

Mammalian Cell

Selection:

None

**Vector:** pLenti-C-Myc-DDK (PS100064)

Tag: Myc-DDK

**ACCN:** NM\_014885

ORF Size: 555 bp

**ORF Nucleotide** 

The ORF insert of this clone is exactly the same as(RC202679).

Sequence:

OTI Disclaimer:

The molecular sequence of this clone aligns with the gene accession number as a point of reference only. However, individual transcript sequences of the same gene can differ through naturally occurring variations (e.g. polymorphisms), each with its own valid existence. This clone is substantially in agreement with the reference, but a complete review of all prevailing

variants is recommended prior to use. More info

**OTI Annotation:** This clone was engineered to express the complete ORF with an expression tag. Expression

varies depending on the nature of the gene.

**RefSeg:** NM 014885.1

 RefSeq Size:
 1457 bp

 RefSeq ORF:
 558 bp

 Locus ID:
 10393

 UniProt ID:
 Q9UM13

 Cytogenetics:
 4q31.21

**Protein Families:** Druggable Genome

## Apc10 (ANAPC10) (NM\_014885) Human Tagged ORF Clone Lentiviral Particle - RC202679L1V

Protein Pathways: Cell cycle, Oocyte meiosis, Progesterone-mediated oocyte maturation, Ubiquitin mediated

proteolysis

MW: 21.3 kDa

**Gene Summary:** ANAPC10 is a core subunit of the anaphase-promoting complex (APC), or cyclosome, a

ubiquitin protein ligase that is essential for progression through the cell cycle. APC initiates sister chromatid separation by ubiquitinating the anaphase inhibitor securin (PTTG1; MIM 604147) and triggers exit from mitosis by ubiquitinating cyclin B (CCNB1; MIM 123836), the activating subunit of cyclin-dependent kinase-1 (CDK1; MIM 116940) (summary by Wendt et

al., 2001 [PubMed 11524682]).[supplied by OMIM, Feb 2011]
