

Product datasheet for RC202681L1

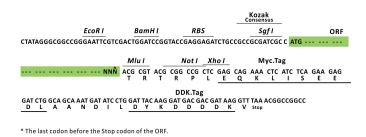

NRAS (NM_002524) Human Tagged Lenti ORF Clone

Product data:

OriGene Technologies, Inc.

9620 Medical Center Drive, Ste 200 Rockville, MD 20850, US Phone: +1-888-267-4436 https://www.origene.com techsupport@origene.com EU: info-de@origene.com CN: techsupport@origene.cn

| Product Type: | Expression Plasmids |
|------------------------------|---|
| Product Name: | NRAS (NM_002524) Human Tagged Lenti ORF Clone |
| Tag: | Myc-DDK |
| Symbol: | NRAS |
| Synonyms: | ALPS4; CMNS; N-ras; NCMS; NRAS1; NS6 |
| Mammalian Cell Selection: | None |
| Vector: | pLenti-C-Myc-DDK (PS100064) |
| E. coli Selection: | Chloramphenicol (34 ug/mL) |
| ORF Nucleotide Sequence: | The ORF insert of this clone is exactly the same as(RC202681). |
| Restriction Sites: | Sgfl-Mlul |
| Cloning Scheme: | |
| | Cloning sites used for ORF Shuttling: Sgf I ORF M/u I GCG ATC GCC ATG// NNN ACG CGT |

ACCN: ORF Size: NM_002524 567 bp

This product is to be used for laboratory only. Not for diagnostic or therapeutic use. ©2023 OriGene Technologies, Inc., 9620 Medical Center Drive, Ste 200, Rockville, MD 20850, US

GRIGENE NRAS (NM_002524) Human Tagged Lenti ORF Clone – RC202681L1

| e to the inherent nature of this plasmid, standard methods to replicate additional amounts DNA in E. coli are highly likely to result in mutations and/or rearrangements. Therefore, Gene does not guarantee the capability to replicate this plasmid DNA. Additional amounts DNA can be purchased from OriGene with batch-specific, full-sequence verification at a uced cost. Please contact our customer care team at <u>custsupport@origene.com</u> or by ing 301.340.3188 option 3 for pricing and delivery. e molecular sequence of this clone aligns with the gene accession number as a point of erence only. However, individual transcript sequences of the same gene can differ through urally occurring variations (e.g. polymorphisms), each with its own valid existence. This ne is substantially in agreement with the reference, but a complete review of all prevailing iants is recommended prior to use. <u>More info</u> s clone was engineered to express the complete ORF with an expression tag. Expression ies depending on the nature of the gene. e ORF clone is ion-exchange column purified and shipped in a 2D barcoded Matrix tube itaining 10ug of transfection-ready, dried plasmid DNA (reconstitute with 100 ul of water). Centrifuge at 5,000xg for 5min. Carefully open the tube and add 100ul of sterile water to dissolve the DNA. Close the tube and incubate for 10 minutes at room temperature. Briefly vortex the tube and then do a quick spin (less than 5000xg) to concentrate the liquid he bottom. tore the suspended plasmid at -20°C. The DNA is stable for at least one year from date of oping when stored at -20°C. |

MW:

21.2 kDa

Gene Summary:

This is an N-ras oncogene encoding a membrane protein that shuttles between the Golgi apparatus and the plasma membrane. This shuttling is regulated through palmitoylation and depalmitoylation by the ZDHHC9-GOLGA7 complex. The encoded protein, which has intrinsic GTPase activity, is activated by a guanine nucleotide-exchange factor and inactivated by a GTPase activating protein. Mutations in this gene have been associated with somatic rectal cancer, follicular thyroid cancer, autoimmune lymphoproliferative syndrome, Noonan syndrome, and juvenile myelomonocytic leukemia. [provided by RefSeq, Jun 2011]
