FABP3 (NM_004102) Human Tagged Lenti ORF Clone

Product data:

Product Type: Expression Plasmids

Product Name: FABP3 (NM_004102) Human Tagged Lenti ORF Clone

Tag: mGFP Symbol: FABP3

Synonyms: FABP11; H-FABP; M-FABP; MDGI; O-FABP

Mammalian Cell Puromycin

Selection:

Vector: pLenti-C-mGFP-P2A-Puro (PS100093)

E. coli Selection: Chloramphenicol (34 ug/mL)

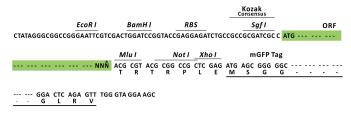

The ORF insert of this clone is exactly the same as(RC202737). **ORF Nucleotide**

Sequence:

Restriction Sites: Sgfl-Mlul

Cloning Scheme:

^{*} The last codon before the Stop codon of the ORF.

ACCN: NM_004102

ORF Size: 399 bp

FABP3 (NM_004102) Human Tagged Lenti ORF Clone - RC202737L4

OTI Disclaimer: The molecular sequence of this clone aligns with the gene accession number as a point of

reference only. However, individual transcript sequences of the same gene can differ through naturally occurring variations (e.g. polymorphisms), each with its own valid existence. This clone is substantially in agreement with the reference, but a complete review of all prevailing

variants is recommended prior to use. More info

OTI Annotation: This clone was engineered to express the complete ORF with an expression tag. Expression

varies depending on the nature of the gene.

Components: The ORF clone is ion-exchange column purified and shipped in a 2D barcoded Matrix tube

containing 10ug of transfection-ready, dried plasmid DNA (reconstitute with 100 ul of water).

Reconstitution Method: 1. Centrifuge at 5,000xg for 5min.

2. Carefully open the tube and add 100ul of sterile water to dissolve the DNA.

3. Close the tube and incubate for 10 minutes at room temperature.

4. Briefly vortex the tube and then do a quick spin (less than 5000xg) to concentrate the liquid

at the bottom.

5. Store the suspended plasmid at -20°C. The DNA is stable for at least one year from date of

shipping when stored at -20°C.

RefSeq: <u>NM 004102.3</u>

RefSeq Size: 1097 bp
RefSeq ORF: 402 bp
Locus ID: 2170

UniProt ID: P05413

Cytogenetics: 1p35.2

Protein Pathways: PPAR signaling pathway

MW: 14.9 kDa

Gene Summary: The intracellular fatty acid-binding proteins (FABPs) belongs to a multigene family. FABPs are

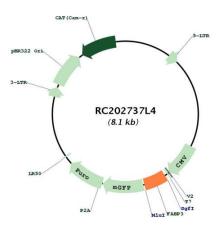

divided into at least three distinct types, namely the hepatic-, intestinal- and cardiac-type. They form 14-15 kDa proteins and are thought to participate in the uptake, intracellular metabolism and/or transport of long-chain fatty acids. They may also be responsible in the modulation of cell growth and proliferation. Fatty acid-binding protein 3 gene contains four exons and its function is to arrest growth of mammary epithelial cells. This gene is a

candidate tumor suppressor gene for human breast cancer. Alternative splicing results in

multiple transcript variants. [provided by RefSeq, Mar 2016]
