IFNGR1 (NM_000416) Human Tagged ORF Clone Lentiviral Particle

Product data:

Product Type: Lentiviral Particles

Product Name: IFNGR1 (NM_000416) Human Tagged ORF Clone Lentiviral Particle

Symbol: IFNGR1

Synonyms: CD119; IFNGR; IMD27A; IMD27B

Mammalian Cell

Selection:

None

Vector: pLenti-C-Myc-DDK (PS100064)

Tag: Myc-DDK

ACCN: NM_000416

ORF Size: 1467 bp

ORF Nucleotide

Sequence:

The ORF insert of this clone is exactly the same as(RC202761).

OTI Disclaimer: The molecular sequence of this clone aligns with the gene accession number as a point of

reference only. However, individual transcript sequences of the same gene can differ through naturally occurring variations (e.g. polymorphisms), each with its own valid existence. This clone is substantially in agreement with the reference, but a complete review of all prevailing

variants is recommended prior to use. More info

OTI Annotation: This clone was engineered to express the complete ORF with an expression tag. Expression

varies depending on the nature of the gene.

RefSeg: NM 000416.1

 RefSeq Size:
 2059 bp

 RefSeq ORF:
 1470 bp

 Locus ID:
 3459

 UniProt ID:
 P15260

Cytogenetics: 6q23.3

Protein Families: Druggable Genome, ES Cell Differentiation/IPS, Transmembrane

IFNGR1 (NM_000416) Human Tagged ORF Clone Lentiviral Particle - RC202761L1V

Protein Pathways: Cytokine-cytokine receptor interaction, Jak-STAT signaling pathway, Natural killer cell

mediated cytotoxicity

MW: 54.4 kDa

Gene Summary: This gene (IFNGR1) encodes the ligand-binding chain (alpha) of the gamma interferon

receptor. Human interferon-gamma receptor is a heterodimer of IFNGR1 and IFNGR2. A genetic variation in IFNGR1 is associated with susceptibility to Helicobacter pylori infection. In addition, defects in IFNGR1 are a cause of mendelian susceptibility to mycobacterial disease, also known as familial disseminated atypical mycobacterial infection. [provided by RefSeq, Jul

2008]
