# TDO2 (NM\_005651) Human Tagged ORF Clone Lentiviral Particle

#### **Product data:**

**Product Type:** Lentiviral Particles

**Product Name:** TDO2 (NM\_005651) Human Tagged ORF Clone Lentiviral Particle

Symbol: TDO2

Synonyms: HYPTRP; TDO; TO; TPH2; TRPO

**Mammalian Cell** 

Selection:

None

**Vector:** pLenti-C-Myc-DDK (PS100064)

 Tag:
 Myc-DDK

 ACCN:
 NM\_005651

 ORF Size:
 1218 bp

**ORF Nucleotide** 

OTI Disclaimer:

Sequence:

The ORF insert of this clone is exactly the same as(RC202777).

The molecular sequence of this clone aligns with the gene accession number as a point of reference only. However, individual transcript sequences of the same gene can differ through

naturally occurring variations (e.g. polymorphisms), each with its own valid existence. This clone is substantially in agreement with the reference, but a complete review of all prevailing

variants is recommended prior to use. More info

**OTI Annotation:** This clone was engineered to express the complete ORF with an expression tag. Expression

varies depending on the nature of the gene.

**RefSeg:** NM 005651.1

 RefSeq Size:
 1703 bp

 RefSeq ORF:
 1221 bp

 Locus ID:
 6999

 UniProt ID:
 P48775

 Cytogenetics:
 4q32.1

**Domains:** Trp\_dioxygenase

**Protein Pathways:** Metabolic pathways, Tryptophan metabolism

## TDO2 (NM\_005651) Human Tagged ORF Clone Lentiviral Particle - RC202777L1V

**MW:** 47.9 kDa

**Gene Summary:** This gene encodes a heme enzyme that plays a critical role in tryptophan metabolism by

catalyzing the first and rate-limiting step of the kynurenine pathway. Increased activity of the encoded protein and subsequent kynurenine production may also play a role in cancer through the suppression of antitumer immune responses, and single purposition.

through the suppression of antitumor immune responses, and single nucleotide

polymorphisms in this gene may be associated with autism. [provided by RefSeq, Feb 2012]
