

# Product datasheet for RC202862L4

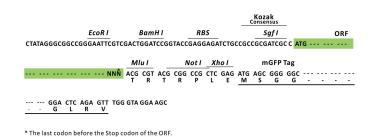

# HTR1D (NM\_000864) Human Tagged Lenti ORF Clone

### **Product data:**

#### OriGene Technologies, Inc.

9620 Medical Center Drive, Ste 200 Rockville, MD 20850, US Phone: +1-888-267-4436 https://www.origene.com techsupport@origene.com EU: info-de@origene.com CN: techsupport@origene.cn

| Product Type:                | Expression Plasmids  |
|------------------------------|--|
| Product Name:                | HTR1D (NM_000864) Human Tagged Lenti ORF Clone   |
| Tag:                         | mGFP   |
| Symbol:                      | HTR1D  |
| Synonyms:                    | 5-HT1D; HT1DA; HTR1DA; HTRL; RDC4  |
| Mammalian Cell<br>Selection: | Puromycin  |
| Vector:                      | pLenti-C-mGFP-P2A-Puro (PS100093)  |
| E. coli Selection:           | Chloramphenicol (34 ug/mL)   |
| ORF Nucleotide<br>Sequence:  | The ORF insert of this clone is exactly the same as(RC202862).                           |
| <b>Restriction Sites:</b>    | Sgfl-Mlul  |
| Cloning Scheme:              |  |
|                              | Cloning sites used for ORF Shuttling:  |
|                              | Sgf I         ORF         Mlu I            GCG ATC GC         ATG // NNÑ         ACG CGT |
|                              |  |

ACCN: ORF Size: NM\_000864 1131 bp

| ORÏGENE HTR1D (NM_000864) Human Tagged Lenti ORF Clone – RC202862L4 |   |
|---|---|
| OTI Disclaimer:   | The molecular sequence of this clone aligns with the gene accession number as a point of reference only. However, individual transcript sequences of the same gene can differ through naturally occurring variations (e.g. polymorphisms), each with its own valid existence. This clone is substantially in agreement with the reference, but a complete review of all prevailing variants is recommended prior to use. <u>More info</u>   |
| OTI Annotation:   | This clone was engineered to express the complete ORF with an expression tag. Expression varies depending on the nature of the gene.  |
| Components:   | The ORF clone is ion-exchange column purified and shipped in a 2D barcoded Matrix tube containing 10ug of transfection-ready, dried plasmid DNA (reconstitute with 100 ul of water).  |
| Reconstitution Method:  | <ol> <li>Centrifuge at 5,000xg for 5min.</li> <li>Carefully open the tube and add 100ul of sterile water to dissolve the DNA.</li> <li>Close the tube and incubate for 10 minutes at room temperature.</li> <li>Briefly vortex the tube and then do a quick spin (less than 5000xg) to concentrate the liquid at the bottom.</li> <li>Store the suspended plasmid at -20°C. The DNA is stable for at least one year from date of shipping when stored at -20°C.</li> </ol>  |
| Note:   | Plasmids are not sterile. For experiments where strict sterility is required, filtration with 0.22um filter is required.  |
| RefSeq:   | <u>NM 000864.3, NP 000855.1</u>   |
| RefSeq Size:  | 2857 bp   |
| RefSeq ORF:   | 1134 bp   |
| Locus ID:   | 3352  |
| UniProt ID:   | <u>P28221</u>   |
| Cytogenetics:   | 1p36.12   |
| Protein Families:   | Druggable Genome, GPCR, Transmembrane   |
| Protein Pathways:   | Neuroactive ligand-receptor interaction   |
| MW:   | 41.9 kDa  |
| Gene Summary:   | G-protein coupled receptor for 5-hydroxytryptamine (serotonin). Also functions as a receptor<br>for ergot alkaloid derivatives, various anxiolytic and antidepressant drugs and other<br>psychoactive substances. Ligand binding causes a conformation change that triggers<br>signaling via guanine nucleotide-binding proteins (G proteins) and modulates the activity of<br>down-stream effectors, such as adenylate cyclase. Signaling inhibits adenylate cyclase activity.<br>Regulates the release of 5-hydroxytryptamine in the brain, and thereby affects neural activity.<br>May also play a role in regulating the release of other neurotransmitters. May play a role in<br>vasoconstriction.[UniProtKB/Swiss-Prot Function] |
