## PLTP (NM\_182676) Human Tagged ORF Clone Lentiviral Particle

#### **Product data:**

Product Type: Lentiviral Particles

**Product Name:** PLTP (NM\_182676) Human Tagged ORF Clone Lentiviral Particle

Symbol: PLTF

Synonyms: BPIFE; HDLCQ9

Mammalian Cell

Selection:

Puromycin

**Vector:** pLenti-C-mGFP-P2A-Puro (PS100093)

Tag: mGFP

**ACCN:** NM\_182676 **ORF Size:** 1323 bp

**ORF Nucleotide** 

The ORF insert of this clone is exactly the same as(RC202925).

Sequence:
OTI Disclaimer:

The molecular sequence of this clone aligns with the gene accession number as a point of reference only. However, individual transcript sequences of the same gene can differ through naturally occurring variations (e.g. polymorphisms), each with its own valid existence. This clone is substantially in agreement with the reference, but a complete review of all prevailing

variants is recommended prior to use. More info

**OTI Annotation:** This clone was engineered to express the complete ORF with an expression tag. Expression

varies depending on the nature of the gene.

**RefSeg:** NM 182676.1

 RefSeq Size:
 1944 bp

 RefSeq ORF:
 1326 bp

 Locus ID:
 5360

 UniProt ID:
 P55058

 Cytogenetics:
 20q13.12

**Protein Families:** Druggable Genome, Secreted Protein

**Protein Pathways:** PPAR signaling pathway

#### PLTP (NM\_182676) Human Tagged ORF Clone Lentiviral Particle - RC202925L4V

**MW:** 49.3 kDa

**Gene Summary:** The protein encoded by this gene is one of at least two lipid transfer proteins found in

human plasma. The encoded protein transfers phospholipids from triglyceride-rich lipoproteins to high density lipoprotein (HDL). In addition to regulating the size of HDL particles, this protein may be involved in cholesterol metabolism. At least two transcript variants encoding different isoforms have been found for this gene. [provided by RefSeq, Jul

2008]
