OTI Disclaimer:

The molecular sequence of this clone aligns with the gene accession number as a point of reference only. However, individual transcript sequences of the same gene can differ through naturally occurring variations (e.g. polymorphisms), each with its own valid existence. This clone is substantially in agreement with the reference, but a complete review of all prevailing

variants is recommended prior to use. More info

**OTI Annotation:** This clone was engineered to express the complete ORF with an expression tag. Expression

varies depending on the nature of the gene.

## AMPD2 (NM\_139156) Human Tagged ORF Clone Lentiviral Particle - RC202938L4V

**MW:** 92.1 kDa

**Gene Summary:** The protein encoded by this gene is important in purine metabolism by converting AMP to

IMP. The encoded protein, which acts as a homotetramer, is one of three AMP deaminases found in mammals. Several transcript variants encoding different isoforms have been found

for this gene. [provided by RefSeq, Apr 2012]
