

Product datasheet for **RC202963L2V**

CXXC5 (NM_016463) Human Tagged ORF Clone Lentiviral Particle

Product data:

| | |
|---------------------------|--|
| Product Type: | Lentiviral Particles |
| Product Name: | CXXC5 (NM_016463) Human Tagged ORF Clone Lentiviral Particle |
| Symbol: | CXXC5 |
| Synonyms: | CF5; HSPC195; RINF; WID |
| Mammalian Cell Selection: | None |
| Vector: | pLenti-C-mGFP (PS100071) |
| Tag: | mGFP |
| ACCN: | NM_016463 |
| ORF Size: | 681 bp |
| ORF Nucleotide Sequence: | The ORF insert of this clone is exactly the same as(RC202963). |
| OTI Disclaimer: | The molecular sequence of this clone aligns with the gene accession number as a point of reference only. However, individual transcript sequences of the same gene can differ through naturally occurring variations (e.g. polymorphisms), each with its own valid existence. This clone is substantially in agreement with the reference, but a complete review of all prevailing variants is recommended prior to use. More info |
| OTI Annotation: | This clone was engineered to express the complete ORF with an expression tag. Expression varies depending on the nature of the gene. |
| RefSeq: | NM_016463.7 |
| RefSeq Size: | 1447 bp |
| RefSeq ORF: | 969 bp |
| Locus ID: | 51523 |
| UniProt ID: | Q7LFL8 |
| Cytogenetics: | 5q31.2 |
| Domains: | zf-CXXC |
| MW: | 24.1 kDa |

Gene Summary:

The protein encoded by this gene is a retinoid-inducible nuclear protein containing a CXXC-type zinc finger motif. The encoded protein is involved in myelopoiesis, is required for DNA damage-induced p53 activation, regulates the differentiation of C2C12 myoblasts into myocytes, and negatively regulates cutaneous wound healing. Several transcript variants encoding the same protein have been found for this gene. [provided by RefSeq, Nov 2015]
