S100A4 (NM_002961) Human Tagged ORF Clone Lentiviral Particle

Product data:

Product Type: Lentiviral Particles

Product Name: S100A4 (NM 002961) Human Tagged ORF Clone Lentiviral Particle

Symbol: S100A4

Synonyms: 18A2; 42A; CAPL; FSP1; MTS1; P9KA; PEL98

Mammalian Cell

Selection:

None

Vector: pLenti-C-Myc-DDK (PS100064)

Tag: Myc-DDK
ACCN: NM 002961

ORF Size: 303 bp

ORF Nucleotide

The ORF insert of this clone is exactly the same as(RC203035).

Sequence:

MW:

OTI Disclaimer: The molecular sequence of this clone aligns with the gene accession number as a point of

reference only. However, individual transcript sequences of the same gene can differ through naturally occurring variations (e.g. polymorphisms), each with its own valid existence. This clone is substantially in agreement with the reference, but a complete review of all prevailing

variants is recommended prior to use. More info

OTI Annotation: This clone was engineered to express the complete ORF with an expression tag. Expression

varies depending on the nature of the gene.

RefSeq: <u>NM 002961.2</u>

 RefSeq Size:
 512 bp

 RefSeq ORF:
 306 bp

 Locus ID:
 6275

 UniProt ID:
 P26447

 Cytogenetics:
 1q21.3

 Domains:
 S_100, EFh

11.7 kDa

Gene Summary:

The protein encoded by this gene is a member of the S100 family of proteins containing 2 EF-hand calcium-binding motifs. S100 proteins are localized in the cytoplasm and/or nucleus of a wide range of cells, and involved in the regulation of a number of cellular processes such as cell cycle progression and differentiation. S100 genes include at least 13 members which are located as a cluster on chromosome 1q21. This protein may function in motility, invasion, and tubulin polymerization. Chromosomal rearrangements and altered expression of this gene have been implicated in tumor metastasis. Multiple alternatively spliced variants, encoding the same protein, have been identified. [provided by RefSeq, Jul 2008]
