DCPS (NM_014026) Human Tagged Lenti ORF Clone

Product data:

Product Type: Expression Plasmids

Product Name: DCPS (NM_014026) Human Tagged Lenti ORF Clone

Tag: mGFP Symbol: DCPS

Synonyms: ARS; DCS1; HINT-5; HINT5; HSL1; HSPC015

Mammalian Cell Puromycin

Selection:

Vector: pLenti-C-mGFP-P2A-Puro (PS100093)

E. coli Selection: Chloramphenicol (34 ug/mL)

ORF Nucleotide The ORF insert of this clone is exactly the same as(RC203052).

Sequence:

Restriction Sites: Sgfl-Mlul

Cloning Scheme:

^{*} The last codon before the Stop codon of the ORF

ACCN: NM_014026

ORF Size: 1011 bp

DCPS (NM_014026) Human Tagged Lenti ORF Clone - RC203052L4

OTI Disclaimer: The molecular sequence of this clone aligns with the gene accession number as a point of

reference only. However, individual transcript sequences of the same gene can differ through naturally occurring variations (e.g. polymorphisms), each with its own valid existence. This clone is substantially in agreement with the reference, but a complete review of all prevailing

variants is recommended prior to use. More info

OTI Annotation: This clone was engineered to express the complete ORF with an expression tag. Expression

varies depending on the nature of the gene.

Components: The ORF clone is ion-exchange column purified and shipped in a 2D barcoded Matrix tube

containing 10ug of transfection-ready, dried plasmid DNA (reconstitute with 100 ul of water).

Reconstitution Method: 1. Centrifuge at 5,000xg for 5min.

2. Carefully open the tube and add 100ul of sterile water to dissolve the DNA.

3. Close the tube and incubate for 10 minutes at room temperature.

4. Briefly vortex the tube and then do a quick spin (less than 5000xg) to concentrate the liquid

at the bottom.

5. Store the suspended plasmid at -20°C. The DNA is stable for at least one year from date of

shipping when stored at -20°C.

RefSeq: <u>NM 014026.3</u>

 RefSeq Size:
 1508 bp

 RefSeq ORF:
 1014 bp

 Locus ID:
 28960

 UniProt ID:
 Q96C86

 Cytogenetics:
 11q24.2

Protein Pathways: RNA degradation

MW: 38.7 kDa

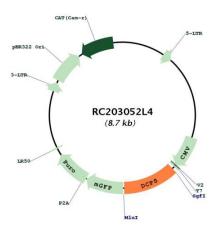

Gene Summary: This gene encodes a member of the histidine triad family of pyrophosphatases that removes

short mRNA fragments containing the 5′ mRNA cap structure, which appear in the 3′ → 5′ mRNA decay pathway, following deadenylation and exosome-mediated turnover. This enzyme hydrolyzes the triphosphate linkage of the cap structure (7-methylguanosine nucleoside triphosphate) to yield 7-methylguanosine monophosphate and nucleoside diphosphate. It protects the cell from the potentially toxic accumulation of these short, capped mRNA fragments, and regulates the activity of other cap-binding proteins, which are inhibited by their accumulation. It also acts as a transcript-specific modulator of

pre-mRNA splicing and microRNA turnover. [provided by RefSeq, Apr 2017]
