TUSC3 (NM_178234) Human Tagged Lenti ORF Clone

Product data:

Product Type: Expression Plasmids

Product Name: TUSC3 (NM_178234) Human Tagged Lenti ORF Clone

Tag: mGFP Symbol: TUSC3

Synonyms: D8S1992; M33; MagT2; MRT7; MRT22; N33; OST3A; SLC58A2

Mammalian Cell Puromycin

Selection:

Vector: pLenti-C-mGFP-P2A-Puro (PS100093)

E. coli Selection: Chloramphenicol (34 ug/mL)

The ORF insert of this clone is exactly the same as(RC203082). **ORF Nucleotide**

Sequence:

Restriction Sites: Sgfl-Mlul

Cloning Scheme:

^{*} The last codon before the Stop codon of the ORF.

ACCN: NM_178234

ORF Size: 1041 bp

TUSC3 (NM_178234) Human Tagged Lenti ORF Clone - RC203082L4

OTI Disclaimer: The molecular sequence of this clone aligns with the gene accession number as a point of

reference only. However, individual transcript sequences of the same gene can differ through naturally occurring variations (e.g. polymorphisms), each with its own valid existence. This clone is substantially in agreement with the reference, but a complete review of all prevailing

variants is recommended prior to use. More info

OTI Annotation: This clone was engineered to express the complete ORF with an expression tag. Expression

varies depending on the nature of the gene.

Components: The ORF clone is ion-exchange column purified and shipped in a 2D barcoded Matrix tube

containing 10ug of transfection-ready, dried plasmid DNA (reconstitute with 100 ul of water).

Reconstitution Method: 1. Centrifuge at 5,000xg for 5min.

2. Carefully open the tube and add 100ul of sterile water to dissolve the DNA.

3. Close the tube and incubate for 10 minutes at room temperature.

4. Briefly vortex the tube and then do a quick spin (less than 5000xg) to concentrate the liquid

at the bottom.

5. Store the suspended plasmid at -20°C. The DNA is stable for at least one year from date of

shipping when stored at -20°C.

RefSeq: <u>NM 178234.1</u>

 RefSeq Size:
 3823 bp

 RefSeq ORF:
 1044 bp

 Locus ID:
 7991

UniProt ID: Q13454

Cytogenetics: 8p22

Protein Families: Druggable Genome, Transmembrane

Protein Pathways: Metabolic pathways, N-Glycan biosynthesis

MW: 39.6 kDa

Gene Summary: This gene encodes a protein that has been associated with several biological functions

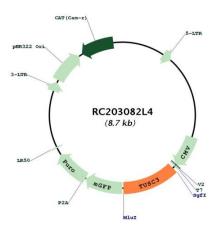

including cellular magnesium uptake, protein glycosylation and embryonic development. This protein localizes to the endoplasmic reticulum and acts as a component of the oligosaccharyl transferase complex which is responsible for N-linked protein glycosylation. This gene is a candidate tumor suppressor gene. Homozygous mutations in this gene are associated with autosomal recessive nonsyndromic mental retardation-7 and in the proliferation and

invasiveness of several cancers including metastatic pancreatic cancer, ovarian cancer and

glioblastoma multiform. [provided by RefSeq, Oct 2017]
