ERCC8 (NM_001007234) Human Tagged ORF Clone Lentiviral Particle

Product data:

Product Type: Lentiviral Particles

Product Name: ERCC8 (NM 001007234) Human Tagged ORF Clone Lentiviral Particle

Symbol: ERCC8

Synonyms: CKN1; CSA; UVSS2

Mammalian Cell

Selection:

Puromycin

Vector: pLenti-C-mGFP-P2A-Puro (PS100093)

Tag: mGFP

ACCN: NM_001007234

ORF Size: 615 bp

ORF Nucleotide

The ORF insert of this clone is exactly the same as(RC203124).

Sequence:

OTI Disclaimer: The molecular sequence of this clone aligns with the gene accession number as a point of

reference only. However, individual transcript sequences of the same gene can differ through naturally occurring variations (e.g. polymorphisms), each with its own valid existence. This clone is substantially in agreement with the reference, but a complete review of all prevailing

variants is recommended prior to use. More info

OTI Annotation: This clone was engineered to express the complete ORF with an expression tag. Expression

varies depending on the nature of the gene.

RefSeq: <u>NM 001007234.1</u>

 RefSeq Size:
 908 bp

 RefSeq ORF:
 618 bp

 Locus ID:
 1161

 UniProt ID:
 Q13216

 Cytogenetics:
 5q12.1

Protein Families: Druggable Genome, Transcription Factors

Protein Pathways: Nucleotide excision repair, Ubiquitin mediated proteolysis

ORIGENE

MW: 23.2 kDa

Gene Summary: This gene encodes a WD repeat protein, which interacts with Cockayne syndrome type B

(CSB) protein and with p44 protein, a subunit of the RNA polymerase II transcription factor IIH. Mutations in this gene have been identified in patients with hereditary disease Cockayne syndrome (CS). CS cells are abnormally sensitive to ultraviolet radiation and are defective in the repair of transcriptionally active genes. Several transcript variants encoding different

isoforms have been found for this gene. [provided by RefSeq, Mar 2014]
