Annexin IV (ANXA4) (NM 001153) Human Tagged ORF Clone Lentiviral Particle

Product data:

Product Type: Lentiviral Particles

Product Name: Annexin IV (ANXA4) (NM_001153) Human Tagged ORF Clone Lentiviral Particle

Symbol: Annexin IV

Synonyms: ANX4; HEL-S-274; P32.5; PAP-II; PIG28; PP4-X; ZAP36

Mammalian Cell

Selection:

Puromycin

Vector: pLenti-C-Myc-DDK-P2A-Puro (PS100092)

Tag: Myc-DDK
ACCN: NM 001153

ORF Size: 963 bp

ORF Nucleotide

The ORF insert of this clone is exactly the same as(RC203229).

Sequence:

OTI Disclaimer:

The molecular sequence of this clone aligns with the gene accession number as a point of reference only. However, individual transcript sequences of the same gene can differ through naturally occurring variations (e.g. polymorphisms), each with its own valid existence. This clone is substantially in agreement with the reference, but a complete review of all prevailing

variants is recommended prior to use. More info

OTI Annotation: This clone was engineered to express the complete ORF with an expression tag. Expression

varies depending on the nature of the gene.

RefSeq: <u>NM 001153.2</u>

RefSeq Size: 2158 bp
RefSeq ORF: 966 bp
Locus ID: 307
UniProt ID: P09525
Cytogenetics: 2p13.3
Domains: annexin

MW: 36.1 kDa

Gene Summary:

Annexin IV (ANX4) belongs to the annexin family of calcium-dependent phospholipid binding proteins. Although their functions are still not clearly defined, several members of the annexin family have been implicated in membrane-related events along exocytotic and endocytotic pathways. ANX4 has 45 to 59% identity with other members of its family and shares a similar size and exon-intron organization. Isolated from human placenta, ANX4 encodes a protein that has possible interactions with ATP, and has in vitro anticoagulant activity and also inhibits phospholipase A2 activity. ANX4 is almost exclusively expressed in epithelial cells. Several transcript variants encoding different isoforms have been found for this gene. [provided by RefSeq, Mar 2016]
