Biliverdin Reductase (BLVRA) (NM_000712) Human Tagged Lenti ORF Clone

Product data:

Product Type: Expression Plasmids

Product Name: Biliverdin Reductase (BLVRA) (NM_000712) Human Tagged Lenti ORF Clone

Tag: mGFP

Symbol: Biliverdin Reductase

Synonyms: BLVR; BVR; BVRA

Mammalian Cell None

Selection:

Vector: pLenti-C-mGFP (PS100071)

E. coli Selection: Chloramphenicol (34 ug/mL)

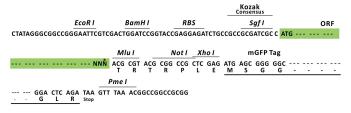

ORF Nucleotide The ORF insert of this clone is exactly the same as(RC203243).

Sequence:

Restriction Sites: Sgfl-Mlul

Cloning Scheme:

^{*} The last codon before the Stop codon of the ORF.

ACCN: NM_000712

ORF Size: 888 bp

Biliverdin Reductase (BLVRA) (NM_000712) Human Tagged Lenti ORF Clone - RC203243L2

OTI Disclaimer: The molecular sequence of this clone aligns with the gene accession number as a point of

reference only. However, individual transcript sequences of the same gene can differ through naturally occurring variations (e.g. polymorphisms), each with its own valid existence. This clone is substantially in agreement with the reference, but a complete review of all prevailing

variants is recommended prior to use. More info

OTI Annotation: This clone was engineered to express the complete ORF with an expression tag. Expression

varies depending on the nature of the gene.

Components: The ORF clone is ion-exchange column purified and shipped in a 2D barcoded Matrix tube

containing 10ug of transfection-ready, dried plasmid DNA (reconstitute with 100 ul of water).

Reconstitution Method: 1. Centrifuge at 5,000xg for 5min.

2. Carefully open the tube and add 100ul of sterile water to dissolve the DNA.

3. Close the tube and incubate for 10 minutes at room temperature.

4. Briefly vortex the tube and then do a quick spin (less than 5000xg) to concentrate the liquid

at the bottom.

5. Store the suspended plasmid at -20°C. The DNA is stable for at least one year from date of

shipping when stored at -20°C.

RefSeq: <u>NM 000712.3</u>

RefSeq Size: 1094 bp RefSeq ORF: 891 bp

Locus ID: 644

 UniProt ID:
 P53004

 Cytogenetics:
 7p13

Domains: GFO IDH MocA

Protein Pathways: Porphyrin and chlorophyll metabolism

MW: 33.4 kDa

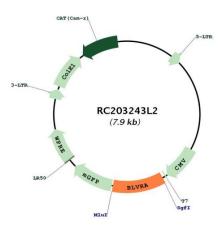

Gene Summary: The protein encoded by this gene belongs to the biliverdin reductase family, members of

which catalyze the conversion of biliverdin to bilirubin in the presence of NADPH or NADH. Mutations in this gene are associated with hyperbiliverdinemia. Alternatively spliced

transcript variants have been found for this gene. [provided by RefSeq, Dec 2011]
