## Product datasheet for RC203251L3V

## Microsomal Glutathione S transferase 1 (MGST1) (NM\_020300) Human Tagged ORF Clone Lentiviral Particle

## **Product data:**

| Product Name:Microsomal Glutathione S transferase 1 (MGST1) (NM_020300) Human Tagged ORF Clone<br>Lentiviral ParticleSymbol:Microsomal Glutathione S transferase 1Synonyms:GST12; MGST; MGST-IMammalian Cell<br>Selection:PuromycinVector:pLenti-C-Myc-DDK-P2A-Puro (PS100092)Tag:Myc-DDKACCN:NM_020300   |
|---|
| Synonyms:GST12; MGST; MGST-IMammalian Cell<br>Selection:PuromycinVector:pLenti-C-Myc-DDK-P2A-Puro (PS100092)Tag:Myc-DDK   |
| Mammalian Cell<br>Selection:PuromycinVector:pLenti-C-Myc-DDK-P2A-Puro (PS100092)Tag:Myc-DDK   |
| Selection:Vector:pLenti-C-Myc-DDK-P2A-Puro (PS100092)Tag:Myc-DDK  |
| Tag: Myc-DDK  |
|   |
| ACCN: NM_020300   |
|   |
| <b>ORF Size:</b> 465 bp   |
| ORF NucleotideThe ORF insert of this clone is exactly the same as(RC203251).Sequence:   |
| OTI Disclaimer: The molecular sequence of this clone aligns with the gene accession number as a point of reference only. However, individual transcript sequences of the same gene can differ through naturally occurring variations (e.g. polymorphisms), each with its own valid existence. This clone is substantially in agreement with the reference, but a complete review of all prevailing variants is recommended prior to use. <u>More info</u> |
| <b>OTI Annotation:</b> This clone was engineered to express the complete ORF with an expression tag. Expression varies depending on the nature of the gene.   |
| RefSeq: NM 020300.3   |
| RefSeq Size: 944 bp   |
| RefSeq ORF:468 bp   |
| Locus ID: 4257  |
| UniProt ID: <u>P10620</u>   |
| Cytogenetics: 12p12.3   |
| Domains: MAPEG  |

This product is to be used for laboratory only. Not for diagnostic or therapeutic use. ©2023 OriGene Technologies, Inc., 9620 Medical Center Drive, Ste 200, Rockville, MD 20850, US

| Protein Families:<br>Protein Pathways: | Druggable Genome, Transmembrane<br>Drug metabolism - cytochrome P450, Glutathione metabolism, Metabolism of xenobiotics by<br>cytochrome P450  |

| MW:                                    | 17.6 kDa   |
| Gene Summary:                          | The MAPEG (Membrane Associated Proteins in Eicosanoid and Glutathione metabolism)<br>family consists of six human proteins, two of which are involved in the production of<br>leukotrienes and prostaglandin E, important mediators of inflammation. Other family<br>members, demonstrating glutathione S-transferase and peroxidase activities, are involved in<br>cellular defense against toxic, carcinogenic, and pharmacologically active electrophilic<br>compounds. This gene encodes a protein that catalyzes the conjugation of glutathione to<br>electrophiles and the reduction of lipid hydroperoxides. This protein is localized to the<br>endoplasmic reticulum and outer mitochondrial membrane where it is thought to protect<br>these membranes from oxidative stress. Several transcript variants, some non-protein coding<br>and some protein coding, have been found for this gene. [provided by RefSeq, May 2012] |
