SIAH Interacting Protein (CACYBP) (NM 014412) Human Tagged ORF Clone Lentiviral Particle

Product data:

Product Type: Lentiviral Particles

Product Name: SIAH Interacting Protein (CACYBP) (NM 014412) Human Tagged ORF Clone Lentiviral Particle

Symbol: **SIAH Interacting Protein**

GIG5; PNAS-107; S100A6BP; SIP Synonyms:

Mammalian Cell

Selection:

Puromycin

Vector: pLenti-C-mGFP-P2A-Puro (PS100093)

mGFP Tag:

NM 014412 ACCN:

ORF Size: 684 bp

ORF Nucleotide

Sequence: OTI Disclaimer:

Domains:

The ORF insert of this clone is exactly the same as(RC203302).

The molecular sequence of this clone aligns with the gene accession number as a point of reference only. However, individual transcript sequences of the same gene can differ through naturally occurring variations (e.g. polymorphisms), each with its own valid existence. This clone is substantially in agreement with the reference, but a complete review of all prevailing

variants is recommended prior to use. More info

OTI Annotation: This clone was engineered to express the complete ORF with an expression tag. Expression

varies depending on the nature of the gene.

RefSeq: NM 014412.2

RefSeq Size: 3060 bp RefSeq ORF: 687 bp Locus ID: 27101 **UniProt ID:** Q9HB71 Cytogenetics: 1q25.1

Protein Pathways: Wnt signaling pathway

SGS

SIAH Interacting Protein (CACYBP) (NM_014412) Human Tagged ORF Clone Lentiviral Particle – RC203302L4V

MW: 26.2 kDa

Gene Summary:

The protein encoded by this gene is a calcyclin binding protein. It may be involved in calcium-dependent ubiquitination and subsequent proteosomal degradation of target proteins. It probably serves as a molecular bridge in ubiquitin E3 complexes and participates in the ubiquitin-mediated degradation of beta-catenin. Two alternatively spliced transcript variants encoding different isoforms have been found for this gene. [provided by RefSeq, Jul 2008]
