Product datasheet for RC203344L4V

Nucleophosmin (NPM1) (NM_002520) Human Tagged ORF Clone Lentiviral Particle

Product data:

Product Type:	Lentiviral Particles
Product Name:	Nucleophosmin (NPM1) (NM_002520) Human Tagged ORF Clone Lentiviral Particle
Symbol:	Nucleophosmin
Synonyms:	B23; NPM
Mammalian Cell Selection:	Puromycin
Vector:	pLenti-C-mGFP-P2A-Puro (PS100093)
Tag:	mGFP
ACCN:	NM_002520
ORF Size:	882 bp
ORF Nucleotide Sequence:	The ORF insert of this clone is exactly the same as(RC203344).
OTI Disclaimer:	The molecular sequence of this clone aligns with the gene accession number as a point of reference only. However, individual transcript sequences of the same gene can differ through naturally occurring variations (e.g. polymorphisms), each with its own valid existence. This clone is substantially in agreement with the reference, but a complete review of all prevailing variants is recommended prior to use. <u>More info</u>
OTI Annotation:	This clone was engineered to express the complete ORF with an expression tag. Expression varies depending on the nature of the gene.
RefSeq:	<u>NM 002520.4</u>
RefSeq Size:	1449 bp
RefSeq ORF:	885 bp
Locus ID:	4869
UniProt ID:	<u>P06748</u>
Cytogenetics:	5q35.1
Domains:	Nucleoplasmin
Protein Families:	Druggable Genome, Stem cell - Pluripotency, Transcription Factors

This product is to be used for laboratory only. Not for diagnostic or therapeutic use. ©2023 OriGene Technologies, Inc., 9620 Medical Center Drive, Ste 200, Rockville, MD 20850, US

	Nucleophosmin (NPM1) (NM_002520) Human Tagged ORF Clone Lentiviral Particle – RC203344L4V
MW:	32.6 kDa
Gene Summary:	The protein encoded by this gene is involved in several cellular processes, including centrosome duplication, protein chaperoning, and cell proliferation. The encoded phosphoprotein shuttles between the nucleolus, nucleus, and cytoplasm, chaperoning ribosomal proteins and core histones from the nucleus to the cytoplasm. This protein is also known to sequester the tumor suppressor ARF in the nucleolus, protecting it from degradation until it is needed. Mutations in this gene are associated with acute myeloid leukemia. Dozens of pseudogenes of this gene have been identified. [provided by RefSeq, Aug 2017]
