#### XKR8 (NM\_018053) Human Tagged Lenti ORF Clone - RC203363L3

**OTI Disclaimer:** The molecular sequence of this clone aligns with the gene accession number as a point of

reference only. However, individual transcript sequences of the same gene can differ through naturally occurring variations (e.g. polymorphisms), each with its own valid existence. This clone is substantially in agreement with the reference, but a complete review of all prevailing

variants is recommended prior to use. More info

**OTI Annotation:** This clone was engineered to express the complete ORF with an expression tag. Expression

varies depending on the nature of the gene.

**Components:** The ORF clone is ion-exchange column purified and shipped in a 2D barcoded Matrix tube

containing 10ug of transfection-ready, dried plasmid DNA (reconstitute with 100 ul of water).

**Reconstitution Method:** 1. Centrifuge at 5,000xg for 5min.

2. Carefully open the tube and add 100ul of sterile water to dissolve the DNA.

3. Close the tube and incubate for 10 minutes at room temperature.

4. Briefly vortex the tube and then do a quick spin (less than 5000xg) to concentrate the liquid

at the bottom.

5. Store the suspended plasmid at -20°C. The DNA is stable for at least one year from date of

shipping when stored at -20°C.

**RefSeq:** <u>NM 018053.2</u>

RefSeq Size: 2179 bp
RefSeq ORF: 1188 bp
Locus ID: 55113
UniProt ID: Q9H6D3
Cytogenetics: 1p35.3

**Protein Families:** Transmembrane

**MW:** 44.5 kDa

**Gene Summary:** Promotes phosphatidylserine exposure on apoptotic cell surface, possibly by mediating

phospholipid scrambling. Phosphatidylserine is a specific marker only present at the surface of apoptotic cells and acts as a specific signal for engulfment. Has no effect on calciuminduced exposure of phosphatidylserine. Activated upon caspase cleavage, suggesting that it

does not act prior the onset of apoptosis.[UniProtKB/Swiss-Prot Function]
