OTI Disclaimer:	The molecular sequence of this clone aligns with the gene accession number as a point of
	reference only. However, individual transcript sequences of the same gene can differ through naturally occurring variations (e.g. polymorphisms), each with its own valid existence. This clone is substantially in agreement with the reference, but a complete review of all prevailing variants is recommended prior to use. <u>More info</u>
OTI Annotation:	naturally occurring variations (e.g. polymorphisms), each with its own valid existence. This clone is substantially in agreement with the reference, but a complete review of all prevailing

Gene Summary:Plays an essential role in mitochondrial ribosome biogenesis. As a component of a functional
protein-RNA module, consisting of RCC1L, NGRN, RPUSD3, RPUSD4, TRUB2, FASTKD2 and 16S
mitochondrial ribosomal RNA (16S mt-rRNA), controls 16S mt-rRNA abundance and is
required for intra-mitochondrial translation of core subunits of the oxidative phosphorylation
system.[UniProtKB/Swiss-Prot Function]
