ALS2CR2 (STRADB) (NM_018571) Human Tagged Lenti ORF Clone

Product data:

Product Type: Expression Plasmids

Product Name: ALS2CR2 (STRADB) (NM_018571) Human Tagged Lenti ORF Clone

Tag: Myc-DDK Symbol: ALS2CR2

Synonyms: ALS2CR2; CALS-21; ILPIP; ILPIPA; PAPK; PRO1038

Mammalian Cell Puromycin

Selection:

Vector: pLenti-C-Myc-DDK-P2A-Puro (PS100092)

E. coli Selection: Chloramphenicol (34 ug/mL)

ORF Nucleotide The ORF insert of this clone is exactly the same as(RC203432).

Sequence:

Restriction Sites: Sgfl-Mlul

Cloning Scheme:

^{*} The last codon before the Stop codon of the ORF.

ACCN: NM_018571

ORF Size: 1254 bp

ALS2CR2 (STRADB) (NM_018571) Human Tagged Lenti ORF Clone - RC203432L3

OTI Disclaimer: The molecular sequence of this clone aligns with the gene accession number as a point of

reference only. However, individual transcript sequences of the same gene can differ through naturally occurring variations (e.g. polymorphisms), each with its own valid existence. This clone is substantially in agreement with the reference, but a complete review of all prevailing

variants is recommended prior to use. More info

OTI Annotation: This clone was engineered to express the complete ORF with an expression tag. Expression

varies depending on the nature of the gene.

Components: The ORF clone is ion-exchange column purified and shipped in a 2D barcoded Matrix tube

containing 10ug of transfection-ready, dried plasmid DNA (reconstitute with 100 ul of water).

Reconstitution Method: 1. Centrifuge at 5,000xg for 5min.

2. Carefully open the tube and add 100ul of sterile water to dissolve the DNA.

3. Close the tube and incubate for 10 minutes at room temperature.

4. Briefly vortex the tube and then do a quick spin (less than 5000xg) to concentrate the liquid

at the bottom.

5. Store the suspended plasmid at -20°C. The DNA is stable for at least one year from date of

shipping when stored at -20°C.

RefSeq: <u>NM 018571.5</u>

 RefSeq Size:
 2300 bp

 RefSeq ORF:
 1257 bp

 Locus ID:
 55437

 UniProt ID:
 Q9C0K7

 Cytogenetics:
 2q33.1

Domains: pkinase, TyrKc, S TKc

Protein Families: Druggable Genome, Protein Kinase

MW: 47 kDa

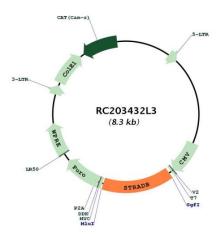

Gene Summary: This gene encodes a protein that belongs to the serine/threonine protein kinase STE20

subfamily. One of the active site residues in the protein kinase domain of this protein is altered, and it is thus a pseudokinase. This protein is a component of a complex involved in the activation of serine/threonine kinase 11, a master kinase that regulates cell polarity and energy-generating metabolism. This complex regulates the relocation of this kinase from the nucleus to the cytoplasm, and it is essential for G1 cell cycle arrest mediated by this kinase. The protein encoded by this gene can also interact with the X chromosome-linked inhibitor of apoptosis protein, and this interaction enhances the anti-apoptotic activity of this protein via the JNK1 signal transduction pathway. Two pseudogenes, located on chromosomes 1 and 7, have been found for this gene. Alternatively spliced transcript variants encoding different

isoforms have been found for this gene. [provided by RefSeq, May 2011]
