| ORF Size:                    | 1293 bp                                                                                                                                                                                                                                                                                                                                                                                                                                   |
| ORF Nucleotide<br>Sequence:  | The ORF insert of this clone is exactly the same as(RC203435).                                                                                                                                                                                                                                                                                                                                                                            |
| OTI Disclaimer:              | The molecular sequence of this clone aligns with the gene accession number as a point of reference only. However, individual transcript sequences of the same gene can differ through naturally occurring variations (e.g. polymorphisms), each with its own valid existence. This clone is substantially in agreement with the reference, but a complete review of all prevailing variants is recommended prior to use. <u>More info</u> |
| OTI Annotation:              | This clone was engineered to express the complete ORF with an expression tag. Expression varies depending on the nature of the gene.                                                                                                                                                                                                                                                                                                      |
| RefSeq:                      | <u>NM 014063.5</u>                                                                                                                                                                                                                                                                                                                                                                                                                        |

Gene Summary:Adapter protein that binds F-actin and DNM1, and thereby plays a role in receptor-mediated<br/>endocytosis. Plays a role in the reorganization of the actin cytoskeleton, formation of cell<br/>projections, such as neurites, in neuron morphogenesis and synapse formation via its<br/>interaction with WASL and COBL. Does not bind G-actin and promote actin polymerization by<br/>itself. Required for the formation of organized podosome rosettes (By similarity). May act as a<br/>common effector of antigen receptor-signaling pathways in leukocytes. Acts as a key<br/>component of the immunological synapse that regulates T-cell activation by bridging TCRs<br/>and the actin cytoskeleton to gene activation and endocytic processes.[UniProtKB/Swiss-Prot<br/>Function]
