

# Product datasheet for RC203488L3

## RGS10 (NM\_001005339) Human Tagged Lenti ORF Clone

### **Product data:**

Product Type:	Expression Plasmids
Product Name:	RGS10 (NM_001005339) Human Tagged Lenti ORF Clone
Tag:	Myc-DDK
Symbol:	RGS10
Mammalian Cell Selection:	Puromycin
Vector:	pLenti-C-Myc-DDK-P2A-Puro (PS100092)
E. coli Selection:	Chloramphenicol (34 ug/mL)
ORF Nucleotide Sequence:	The ORF insert of this clone is exactly the same as(RC203488).
<b>Restriction Sites:</b>	Sgfl-Mlul
Cloning Scheme:	
	Cloning sites used for ORF Shuttling:
	Sgf I         ORF         Mlu I            GCG ATC GC         ATG//         NNN         ACG CGT

\* The last codon before the Stop codon of the ORF.

ACCN: ORF Size: NM\_001005339 543 bp

This product is to be used for laboratory only. Not for diagnostic or therapeutic use. ©2023 OriGene Technologies, Inc., 9620 Medical Center Drive, Ste 200, Rockville, MD 20850, US

OTI Disclaimer:	
	Due to the inherent nature of this plasmid, standard methods to replicate additional amounts of DNA in E. coli are highly likely to result in mutations and/or rearrangements. Therefore, OriGene does not guarantee the capability to replicate this plasmid DNA. Additional amounts of DNA can be purchased from OriGene with batch-specific, full-sequence verification at a reduced cost. Please contact our customer care team at <u>custsupport@origene.com</u> or by calling 301.340.3188 option 3 for pricing and delivery.
	The molecular sequence of this clone aligns with the gene accession number as a point of reference only. However, individual transcript sequences of the same gene can differ through naturally occurring variations (e.g. polymorphisms), each with its own valid existence. This clone is substantially in agreement with the reference, but a complete review of all prevailing variants is recommended prior to use. <u>More info</u>
OTI Annotation:	This clone was engineered to express the complete ORF with an expression tag. Expression varies depending on the nature of the gene.
Components:	The ORF clone is ion-exchange column purified and shipped in a 2D barcoded Matrix tube containing 10ug of transfection-ready, dried plasmid DNA (reconstitute with 100 ul of water).
Reconstitution Method:	<ol> <li>Centrifuge at 5,000xg for 5min.</li> <li>Carefully open the tube and add 100ul of sterile water to dissolve the DNA.</li> <li>Close the tube and incubate for 10 minutes at room temperature.</li> <li>Briefly vortex the tube and then do a quick spin (less than 5000xg) to concentrate the liquid at the bottom.</li> <li>Store the suspended plasmid at -20°C. The DNA is stable for at least one year from date of shipping when stored at -20°C.</li> </ol>
RefSeq:	<u>NM 001005339.1</u>
RefSeq Size:	910 bp
RefSeq ORF:	546 bp
Locus ID:	6001
UniProt ID:	<u>043665</u>
Cytogenetics:	10q26.11
MW:	21.2 kDa

This product is to be used for laboratory only. Not for diagnostic or therapeutic use. ©2023 OriGene Technologies, Inc., 9620 Medical Center Drive, Ste 200, Rockville, MD 20850, US

#### **GRIGENE** RGS10 (NM\_001005339) Human Tagged Lenti ORF Clone – RC203488L3

Gene Summary:Regulator of G protein signaling (RGS) family members are regulatory molecules that act as<br/>GTPase activating proteins (GAPs) for G alpha subunits of heterotrimeric G proteins. RGS<br/>proteins are able to deactivate G protein subunits of the Gi alpha, Go alpha and Gq alpha<br/>subtypes. They drive G proteins into their inactive GDP-bound forms. Regulator of G protein<br/>signaling 10 belongs to this family. All RGS proteins share a conserved 120-amino acid<br/>sequence termed the RGS domain. This protein associates specifically with the activated<br/>forms of the two related G-protein subunits, G-alphai3 and G-alphaz but fails to interact with<br/>the structurally and functionally distinct G-alpha subunits. Regulator of G protein signaling 10<br/>protein is localized in the nucleus. Two transcript variants encoding different isoforms have<br/>been found for this gene. [provided by RefSeq, Jul 2008]
