CREB3 (NM_006368) Human Tagged Lenti ORF Clone

Product data:

Product Type: Expression Plasmids

Product Name: CREB3 (NM_006368) Human Tagged Lenti ORF Clone

Tag: Myc-DDK
Symbol: CREB3

Synonyms: LUMAN; LZIP; sLZIP

Mammalian Cell Puromycin

Selection:

Vector: pLenti-C-Myc-DDK-P2A-Puro (PS100092)

E. coli Selection: Chloramphenicol (34 ug/mL)

ORF Nucleotide The ORF insert of this clone is exactly the same as(RC203489).

Sequence:

Restriction Sites: Sgfl-Mlul

Cloning Scheme:

 $[\]ensuremath{^*}$ The last codon before the Stop codon of the ORF.

ACCN: NM_006368

ORF Size: 1113 bp

CREB3 (NM_006368) Human Tagged Lenti ORF Clone - RC203489L3

OTI Disclaimer: The molecular sequence of this clone aligns with the gene accession number as a point of

reference only. However, individual transcript sequences of the same gene can differ through naturally occurring variations (e.g. polymorphisms), each with its own valid existence. This clone is substantially in agreement with the reference, but a complete review of all prevailing

variants is recommended prior to use. More info

OTI Annotation: This clone was engineered to express the complete ORF with an expression tag. Expression

varies depending on the nature of the gene.

Components: The ORF clone is ion-exchange column purified and shipped in a 2D barcoded Matrix tube

containing 10ug of transfection-ready, dried plasmid DNA (reconstitute with 100 ul of water).

Reconstitution Method: 1. Centrifuge at 5,000xg for 5min.

2. Carefully open the tube and add 100ul of sterile water to dissolve the DNA.

3. Close the tube and incubate for 10 minutes at room temperature.

4. Briefly vortex the tube and then do a quick spin (less than 5000xg) to concentrate the liquid

at the bottom.

5. Store the suspended plasmid at -20°C. The DNA is stable for at least one year from date of

shipping when stored at -20°C.

RefSeq: <u>NM 006368.4</u>

 RefSeq Size:
 1868 bp

 RefSeq ORF:
 1116 bp

 Locus ID:
 10488

 UniProt ID:
 043889

Cytogenetics: 9p13.3

Domains:

Protein Families: Transcription Factors

BRLZ

Protein Pathways: Huntington's disease, Melanogenesis, Prostate cancer

MW: 41.4 kDa

Gene Summary: This gene encodes a transcription factor that is a member of the leucine zipper family of DNA

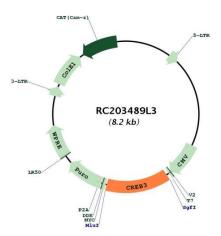

binding proteins. This protein binds to the cAMP-response element and regulates cell proliferation. The protein interacts with host cell factor C1, which also associates with the herpes simplex virus (HSV) protein VP16 that induces transcription of HSV immediate-early genes. This protein and VP16 both bind to the same site on host cell factor C1. It is thought that the interaction between this protein and host cell factor C1 plays a role in the

establishment of latency during HSV infection. This protein also plays a role in leukocyte migration, tumor suppression, and endoplasmic reticulum stress-associated protein degradation. Additional transcript variants have been identified, but their biological validity

has not been determined.[provided by RefSeq, Nov 2009]
