TBCC (NM_003192) Human Tagged ORF Clone Lentiviral Particle

Product data:

Product Type: Lentiviral Particles

Product Name: TBCC (NM 003192) Human Tagged ORF Clone Lentiviral Particle

Symbol: TBCC
Synonyms: CFC

Synonyms: CFC

Mammalian Cell Selection:

Puromycin

Vector: pLenti-C-Myc-DDK-P2A-Puro (PS100092)

 Tag:
 Myc-DDK

 ACCN:
 NM_003192

 ORF Size:
 1038 bp

ORF Nucleotide

The ORF insert of this clone is exactly the same as(RC203563).

Sequence:

OTI Disclaimer: The molecular sequence of this clone aligns with the gene accession number as a point of

reference only. However, individual transcript sequences of the same gene can differ through naturally occurring variations (e.g. polymorphisms), each with its own valid existence. This clone is substantially in agreement with the reference, but a complete review of all prevailing

variants is recommended prior to use. More info

OTI Annotation: This clone was engineered to express the complete ORF with an expression tag. Expression

varies depending on the nature of the gene.

RefSeq: <u>NM 003192.2</u>

RefSeq Size: 1675 bp
RefSeq ORF: 1041 bp
Locus ID: 6903
UniProt ID: Q15814

Cytogenetics: 6p21.1

Domains: CARP

MW: 39.2 kDa

Gene Summary:

Cofactor C is one of four proteins (cofactors A, D, E, and C) involved in the pathway leading to correctly folded beta-tubulin from folding intermediates. Cofactors A and D are believed to play a role in capturing and stabilizing beta-tubulin intermediates in a quasi-native confirmation. Cofactor E binds to the cofactor D/beta-tubulin complex; interaction with cofactor C then causes the release of beta-tubulin polypeptides that are committed to the native state. [provided by RefSeq, Jul 2008]
