BCKDH kinase (BCKDK) (NM_005881) Human Tagged Lenti ORF Clone

Product data:

Product Type: Expression Plasmids

Product Name: BCKDH kinase (BCKDK) (NM_005881) Human Tagged Lenti ORF Clone

Tag:

Symbol: **BCKDH** kinase BCKDKD; BDK Synonyms:

Mammalian Cell None

Selection:

Vector: pLenti-C-mGFP (PS100071) E. coli Selection:

Chloramphenicol (34 ug/mL) The ORF insert of this clone is exactly the same as(RC203601).

Sgfl-Mlul

Sequence:

ORF Nucleotide

Restriction Sites: Cloning Scheme:

^{*} The last codon before the Stop codon of the ORF.

ACCN: NM_005881

ORF Size: 1236 bp

BCKDH kinase (BCKDK) (NM_005881) Human Tagged Lenti ORF Clone - RC203601L2

OTI Disclaimer: The molecular sequence of this clone aligns with the gene accession number as a point of

reference only. However, individual transcript sequences of the same gene can differ through naturally occurring variations (e.g. polymorphisms), each with its own valid existence. This clone is substantially in agreement with the reference, but a complete review of all prevailing

variants is recommended prior to use. More info

OTI Annotation: This clone was engineered to express the complete ORF with an expression tag. Expression

varies depending on the nature of the gene.

Components: The ORF clone is ion-exchange column purified and shipped in a 2D barcoded Matrix tube

containing 10ug of transfection-ready, dried plasmid DNA (reconstitute with 100 ul of water).

Reconstitution Method: 1. Centrifuge at 5,000xg for 5min.

2. Carefully open the tube and add 100ul of sterile water to dissolve the DNA.

3. Close the tube and incubate for 10 minutes at room temperature.

4. Briefly vortex the tube and then do a quick spin (less than 5000xg) to concentrate the liquid

at the bottom.

5. Store the suspended plasmid at -20°C. The DNA is stable for at least one year from date of

shipping when stored at -20°C.

RefSeq: <u>NM 005881.1</u>

 RefSeq Size:
 2144 bp

 RefSeq ORF:
 1239 bp

 Locus ID:
 10295

 UniProt ID:
 014874

 Cytogenetics:
 16p11.2

Domains: HATPase c

Protein Families: Druggable Genome, Protein Kinase

MW: 46.4 kDa

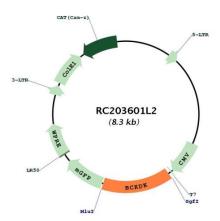

Gene Summary: The branched-chain alpha-ketoacid dehydrogenase complex (BCKD) is an important regulator

of the valine, leucine, and isoleucine catabolic pathways. The protein encoded by this gene is found in the mitochondrion, where it phosphorylates and inactivates BCKD. Several transcript variants encoding different isoforms have been found for this gene. [provided by RefSeq, Dec

2012]
