## GBA2 (NM\_020944) Human Tagged ORF Clone Lentiviral Particle

**Product data:** 

**Product Type:** Lentiviral Particles

Product Name: GBA2 (NM 020944) Human Tagged ORF Clone Lentiviral Particle

Symbol: GBA2

Synonyms: AD035; NLGase; SPG46

Mammalian Cell

Selection:

None

**Vector:** pLenti-C-Myc-DDK (PS100064)

Tag: Myc-DDK
ACCN: NM 020944

ORF Size: 2781 bp

**ORF Nucleotide** 

lootide The O

OTI Disclaimer:

Sequence:

The ORF insert of this clone is exactly the same as(RC203706).

The molecular sequence of this clone aligns with the gene accession number as a point of reference only. However, individual transcript sequences of the same gene can differ through paturally occurring variations (e.g. polymorphisms), each with its own valid existence. This

naturally occurring variations (e.g. polymorphisms), each with its own valid existence. This clone is substantially in agreement with the reference, but a complete review of all prevailing

variants is recommended prior to use. More info

**OTI Annotation:** This clone was engineered to express the complete ORF with an expression tag. Expression

varies depending on the nature of the gene.

RefSeq: <u>NM 020944.2</u>

 RefSeq Size:
 3639 bp

 RefSeq ORF:
 2784 bp

 Locus ID:
 57704

 UniProt ID:
 Q9HCG7

 Cytogenetics:
 9p13.3

Domains: DUF608

**Protein Families:** Druggable Genome

## GBA2 (NM\_020944) Human Tagged ORF Clone Lentiviral Particle - RC203706L1V

**MW:** 104.6 kDa

**Gene Summary:** This gene encodes a microsomal beta-glucosidase that catalyzes the hydrolysis of bile acid 3-

O-glucosides as endogenous compounds. Studies to determine subcellular localization of this protein in the liver indicated that the enzyme was mainly enriched in the microsomal fraction

where it appeared to be confined to the endoplasmic reticulum. This putative

transmembrane protein is thought to play a role in carbohydrate transport and metabolism.
