Gene Summary:Probable molecular chaperone assisting protein biosynthesis and transport in the
endoplasmic reticulum (PubMed:16433634, PubMed:28939891). Required for the proper
biosynthesis and transport of pulmonary surfactant-associated protein A/SP-A, pulmonary
surfactant-associated protein D/SP-D and the lipid transporter ABCA3 (By similarity). By
regulating both the proper expression and the degradation through the endoplasmic
reticulum-associated protein degradation pathway of these proteins plays a crucial role in
pulmonary surfactant homeostasis (By similarity). Has an anti-fibrotic activity by negatively
regulating the secretion of type I and type III collagens (PubMed:28939891). This calcium-
binding protein also transiently associates with immature PCSK6 and regulates its secretion
(PubMed:16433634).[UniProtKB/Swiss-Prot Function]
