OB Cadherin (CDH11) (NM 001797) Human Tagged ORF Clone Lentiviral Particle

Product data:

Product Type: Lentiviral Particles

Product Name: OB Cadherin (CDH11) (NM 001797) Human Tagged ORF Clone Lentiviral Particle

Symbol: OB Cadherin

Synonyms: CAD11; CDHOB; ESWS; OB; OSF-4

Mammalian Cell

Selection:

Puromycin

Vector: pLenti-C-mGFP-P2A-Puro (PS100093)

Tag: mGFP

ACCN: NM_001797 **ORF Size:** 2388 bp

ORF Nucleotide

The ORF insert of this clone is exactly the same as(RC203810).

Sequence:

OTI Disclaimer: The molecular sequence of this clone aligns with the gene accession number as a point of

reference only. However, individual transcript sequences of the same gene can differ through naturally occurring variations (e.g. polymorphisms), each with its own valid existence. This clone is substantially in agreement with the reference, but a complete review of all prevailing

variants is recommended prior to use. More info

OTI Annotation: This clone was engineered to express the complete ORF with an expression tag. Expression

varies depending on the nature of the gene.

RefSeg: NM 001797.2

 RefSeq Size:
 3654 bp

 RefSeq ORF:
 2391 bp

 Locus ID:
 1009

 UniProt ID:
 P55287

 Cytogenetics:
 16q21

Domains: Cadherin_C_term, CA

Protein Families: Druggable Genome, Transmembrane

MW:

88 kDa

Gene Summary:

This gene encodes a type II classical cadherin from the cadherin superfamily, integral membrane proteins that mediate calcium-dependent cell-cell adhesion. Mature cadherin proteins are composed of a large N-terminal extracellular domain, a single membrane-spanning domain, and a small, highly conserved C-terminal cytoplasmic domain. Type II (atypical) cadherins are defined based on their lack of a HAV cell adhesion recognition sequence specific to type I cadherins. Expression of this particular cadherin in osteoblastic cell lines, and its upregulation during differentiation, suggests a specific function in bone development and maintenance. [provided by RefSeq, Jul 2008]
