KChIP2 (KCNIP2) (NM_173192) Human Tagged ORF Clone Lentiviral Particle – RC203823L4V

Gene Summary:This gene encodes a member of the family of voltage-gated potassium (Kv) channel-
interacting proteins (KCNIPs), which belongs to the recoverin branch of the EF-hand
superfamily. Members of the KCNIP family are small calcium binding proteins. They all have
EF-hand-like domains, and differ from each other in the N-terminus. They are integral subunit
components of native Kv4 channel complexes. They may regulate A-type currents, and hence
neuronal excitability, in response to changes in intracellular calcium. Multiple alternatively
spliced transcript variants encoding distinct isoforms have been identified from this gene.
