

Product datasheet for RC203875L4

TBL3 (NM_006453) Human Tagged Lenti ORF Clone

Product data:

Product Type: Expression Plasmids

Product Name: TBL3 (NM_006453) Human Tagged Lenti ORF Clone

Tag: mGFP Symbol: TBL3

Synonyms: SAZD; UTP13

Mammalian Cell Puromycin

Selection:

Vector: pLenti-C-mGFP-P2A-Puro (PS100093)

E. coli Selection: Chloramphenicol (34 ug/mL)

ORF Nucleotide The ORF insert of this clone is exactly the same as(RC203875).

Sequence:

Restriction Sites: Sgfl-Mlul

Cloning Scheme:

 $[\]ensuremath{^*}$ The last codon before the Stop codon of the ORF.

ACCN: NM_006453

ORF Size: 2424 bp

TBL3 (NM_006453) Human Tagged Lenti ORF Clone - RC203875L4

OTI Disclaimer: The molecular sequence of this clone aligns with the gene accession number as a point of

reference only. However, individual transcript sequences of the same gene can differ through naturally occurring variations (e.g. polymorphisms), each with its own valid existence. This clone is substantially in agreement with the reference, but a complete review of all prevailing

variants is recommended prior to use. More info

OTI Annotation: This clone was engineered to express the complete ORF with an expression tag. Expression

varies depending on the nature of the gene.

Components: The ORF clone is ion-exchange column purified and shipped in a 2D barcoded Matrix tube

containing 10ug of transfection-ready, dried plasmid DNA (reconstitute with 100 ul of water).

Reconstitution Method: 1. Centrifuge at 5,000xg for 5min.

2. Carefully open the tube and add 100ul of sterile water to dissolve the DNA.

3. Close the tube and incubate for 10 minutes at room temperature.

4. Briefly vortex the tube and then do a quick spin (less than 5000xg) to concentrate the liquid

at the bottom.

5. Store the suspended plasmid at -20°C. The DNA is stable for at least one year from date of

shipping when stored at -20°C.

RefSeq: <u>NM 006453.2</u>

 RefSeq Size:
 2618 bp

 RefSeq ORF:
 2427 bp

 Locus ID:
 10607

 UniProt ID:
 Q12788

 Cytogenetics:
 16p13.3

Domains: WD40

Protein Families: Druggable Genome

MW: 89 kDa

Gene Summary: The protein encoded by this gene has sequence similarity with members of the WD40 repeat-

containing protein family. The WD40 group is a large family of proteins, which appear to have

a regulatory function. It is believed that the WD40 repeats mediate protein-protein

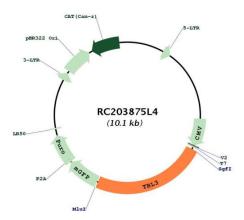

interactions and members of the family are involved in signal transduction, RNA processing, gene regulation, vesicular trafficking, cytoskeletal assembly and may play a role in the control

of cytotypic differentiation. This gene has multiple polyadenylation sites. It might have multiple alternatively spliced transcript variants but the variants have not been fully

described yet. [provided by RefSeq, Jul 2008]
