ZUFSP (ZUP1) (NM_145062) Human Tagged ORF Clone Lentiviral Particle

Product data:

Product Type: Lentiviral Particles

Product Name: ZUFSP (ZUP1) (NM_145062) Human Tagged ORF Clone Lentiviral Particle

Symbol: ZUP²

Synonyms: C6orf113; DUB; ZUFSP

Mammalian Cell

Selection:

None

Vector: pLenti-C-Myc-DDK (PS100064)

Tag: Myc-DDK
ACCN: NM 145062

ORF Size: 1734 bp

ORF Nucleotide

.

Q96AP4

Sequence:

UniProt ID:

The ORF insert of this clone is exactly the same as(RC203925).

OTI Disclaimer: The molecular sequence of this clone aligns with the gene accession number as a point of reference only. However, individual transcript sequences of the same gene can differ through naturally occurring variations (e.g. polymorphisms), each with its own valid existence. This

naturally occurring variations (e.g. polymorphisms), each with its own valid existence. This clone is substantially in agreement with the reference, but a complete review of all prevailing

variants is recommended prior to use. More info

OTI Annotation: This clone was engineered to express the complete ORF with an expression tag. Expression

varies depending on the nature of the gene.

RefSeq: <u>NM 145062.1</u>

RefSeq Size: 2226 bp

RefSeq ORF: 1737 bp

Locus ID: 221302

Cytogenetics: 6q22.1

Domains: zf-C2H2

MW: 66 kDa

Gene Summary:

This gene encodes a protein containing zinc finger motifs and a cysteine peptidase domain. The encoded protein functions as a K63-specific de-ubiquitinating enzyme that specifically cleaves long K63-linked polyubiquitin chains in the middle of a chain (i.e. "endo cleavage) rather than by removing the terminal ubiquitin from a chain. This enzyme is thought to be involved in the regulation of DNA repair by cleaving K63-linked ubiquitin chains at repair foci. This protein is related to proteases for the ubiquitin-like modifiers Ufm1 (ubiquitin fold modifier 1) and Atg8/Gabarapl2, but does not have any activity on these modifiers. [provided by RefSeq, Mar 2018]
