beta IV Tubulin (TUBB4A) (NM_006087) Human Tagged ORF Clone Lentiviral Particle – RC203945L4V	
Protein Pathwa	ys: Gap junction, Pathogenic Escherichia coli infection
MW:	49.6 kDa
Gene Summary	This gene encodes a member of the beta tubulin family. Beta tubulins are one of two core protein families (alpha and beta tubulins) that heterodimerize and assemble to form microtubules. Mutations in this gene cause hypomyelinating leukodystrophy-6 and autosomal dominant torsion dystonia-4. Alternate splicing results in multiple transcript variants encoding different isoforms. A pseudogene of this gene is found on chromosome X. [provided by RefSeq, Jan 2014]
