OTI Disclaimer:

The molecular sequence of this clone aligns with the gene accession number as a point of reference only. However, individual transcript sequences of the same gene can differ through naturally occurring variations (e.g. polymorphisms), each with its own valid existence. This clone is substantially in agreement with the reference, but a complete review of all prevailing

variants is recommended prior to use. More info

**OTI Annotation:** This clone was engineered to express the complete ORF with an expression tag. Expression

varies depending on the nature of the gene.

## ILVBL (NM\_006844) Human Tagged ORF Clone Lentiviral Particle - RC203987L4V

**MW:** 67.9 kDa

**Gene Summary:** The protein encoded by this gene shares similarity with several thiamine pyrophosphate-

binding proteins identified in bacteria, yeast, and plants. The highest degree of similarity is found with bacterial acetolactate synthases (AHAS), which are enzymes that catalyze the first

step in branched-chain amino acid biosynthesis. [provided by RefSeq, Jul 2008]
