## Product datasheet for RC204072L4V

### alpha Tubulin (TUBA3C) (NM\_079836) Human Tagged ORF Clone Lentiviral Particle

#### **Product data:**

| Product Type:                | Lentiviral Particles  |
|------------------------------|---|
| Product Name:                | alpha Tubulin (TUBA3C) (NM_079836) Human Tagged ORF Clone Lentiviral Particle   |
| Symbol:                      | alpha Tubulin   |
| Synonyms:                    | bA408E5.3; TUBA2; tubulin, alpha 2; tubulin, alpha 3c   |
| Mammalian Cell<br>Selection: | Puromycin   |
| Vector:                      | pLenti-C-mGFP-P2A-Puro (PS100093)   |
| Tag:                         | mGFP  |
| ACCN:                        | NM_079836   |
| ORF Size:                    | 1254 bp   |
| ORF Nucleotide<br>Sequence:  | The ORF insert of this clone is exactly the same as(RC204072).  |
| OTI Disclaimer:              | The molecular sequence of this clone aligns with the gene accession number as a point of reference only. However, individual transcript sequences of the same gene can differ through naturally occurring variations (e.g. polymorphisms), each with its own valid existence. This clone is substantially in agreement with the reference, but a complete review of all prevailing variants is recommended prior to use. <u>More info</u> |
| OTI Annotation:              | This clone was engineered to express the complete ORF with an expression tag. Expression varies depending on the nature of the gene.  |
| RefSeq:                      | <u>NM 079836.1, NP 524575.1</u>   |
| RefSeq Size:                 | 1408 bp   |
| RefSeq ORF:                  | 1256 bp   |
| Locus ID:                    | 7278  |
| Cytogenetics:                | 13q12.11  |
| Protein Families:            | Druggable Genome, Stem cell - Pluripotency  |
| Protein Pathways:            | Gap junction, Pathogenic Escherichia coli infection   |
| MW:                          | 46.1 kDa  |

# alpha Tubulin (TUBA3C) (NM\_079836) Human Tagged ORF Clone Lentiviral Particle – RC204072L4V

Gene Summary:Microtubules of the eukaryotic cytoskeleton perform essential and diverse functions and are<br/>composed of a heterodimer of alpha and beta tubulin. The genes encoding these<br/>microtubule constituents are part of the tubulin superfamily, which is composed of six<br/>distinct families. Genes from the alpha, beta and gamma tubulin families are found in all<br/>eukaryotes. The alpha and beta tubulins represent the major components of microtubules,<br/>while gamma tubulin plays a critical role in the nucleation of microtubule assembly. There are<br/>multiple alpha and beta tubulin genes and they are highly conserved among and between<br/>species. This gene is an alpha tubulin gene that encodes a protein 99% identical to the mouse<br/>testis-specific Tuba3 and Tuba7 gene products. This gene is located in the 13q11 region,<br/>which is associated with the genetic diseases Clouston hidrotic ectodermal dysplasia and<br/>Kabuki syndrome. [provided by RefSeq, Jul 2008]
