BTD (NM_000060) Human Tagged Lenti ORF Clone

Product data:

Product Type: Expression Plasmids

Product Name: BTD (NM 000060) Human Tagged Lenti ORF Clone

Tag: Myc-DDK

Symbol: BTD

Synonyms: biotinidase

Mammalian Cell Puromycin

Selection:

Vector: pLenti-C-Myc-DDK-P2A-Puro (PS100092)

E. coli Selection: Chloramphenicol (34 ug/mL)

ORF Nucleotide The ORF insert of this clone is exactly the same as(RC204153).

Sequence:

Restriction Sites: Sgfl-Mlul

Cloning Scheme:

 $[\]ensuremath{^*}$ The last codon before the Stop codon of the ORF.

ACCN: NM_000060

ORF Size: 1629 bp

BTD (NM_000060) Human Tagged Lenti ORF Clone - RC204153L3

OTI Disclaimer: The molecular sequence of this clone aligns with the gene accession number as a point of

reference only. However, individual transcript sequences of the same gene can differ through naturally occurring variations (e.g. polymorphisms), each with its own valid existence. This clone is substantially in agreement with the reference, but a complete review of all prevailing

variants is recommended prior to use. More info

OTI Annotation: This clone was engineered to express the complete ORF with an expression tag. Expression

varies depending on the nature of the gene.

Components: The ORF clone is ion-exchange column purified and shipped in a 2D barcoded Matrix tube

containing 10ug of transfection-ready, dried plasmid DNA (reconstitute with 100 ul of water).

Reconstitution Method: 1. Centrifuge at 5,000xg for 5min.

2. Carefully open the tube and add 100ul of sterile water to dissolve the DNA.

3. Close the tube and incubate for 10 minutes at room temperature.

4. Briefly vortex the tube and then do a quick spin (less than 5000xg) to concentrate the liquid

at the bottom.

5. Store the suspended plasmid at -20°C. The DNA is stable for at least one year from date of

shipping when stored at -20°C.

RefSeq: <u>NM 000060.2</u>

RefSeq Size:2084 bpRefSeq ORF:1632 bp

 UniProt ID:
 P43251

 Cytogenetics:
 3p25.1

Locus ID:

Domains: CN hydrolase

Protein Families: Druggable Genome, Secreted Protein
Protein Pathways: Biotin metabolism, Metabolic pathways

686

MW: 61.1 kDa

Gene Summary: The protein encoded by this gene functions to recycle protein-bound biotin by cleaving

biocytin (biotin-epsilon-lysine), a normal product of carboxylase degradation, resulting in regeneration of free biotin. The encoded protein has also been shown to have biotinyl transferase activity. Mutations in this gene are associated with biotinidase deficiency. Multiple

transcript variants encoding different isoforms have been described. [provided by RefSeq,

Aug 2013]
