Cyclin F (CCNF) (NM_001761) Human Tagged Lenti ORF Clone

Product data:

Product Type: Expression Plasmids

Product Name: Cyclin F (CCNF) (NM_001761) Human Tagged Lenti ORF Clone

Tag: Myc-DDK
Symbol: Cyclin F

Synonyms: FBX1; FBXO1; FTDALS5

Mammalian Cell None

Selection:

Vector:pLenti-C-Myc-DDK (PS100064)E. coli Selection:Chloramphenicol (34 ug/mL)

ORF Nucleotide The ORF insert of this clone is exactly the same as(RC204189).

Sequence:

Restriction Sites: Sgfl-Mlul

Cloning Scheme:

^{*} The last codon before the Stop codon of the ORF

ACCN: NM_001761

ORF Size: 2358 bp

Cyclin F (CCNF) (NM_001761) Human Tagged Lenti ORF Clone - RC204189L1

OTI Disclaimer: The molecular sequence of this clone aligns with the gene accession number as a point of

reference only. However, individual transcript sequences of the same gene can differ through naturally occurring variations (e.g. polymorphisms), each with its own valid existence. This clone is substantially in agreement with the reference, but a complete review of all prevailing

variants is recommended prior to use. More info

OTI Annotation: This clone was engineered to express the complete ORF with an expression tag. Expression

varies depending on the nature of the gene.

Components: The ORF clone is ion-exchange column purified and shipped in a 2D barcoded Matrix tube

containing 10ug of transfection-ready, dried plasmid DNA (reconstitute with 100 ul of water).

Reconstitution Method: 1. Centrifuge at 5,000xg for 5min.

2. Carefully open the tube and add 100ul of sterile water to dissolve the DNA.

3. Close the tube and incubate for 10 minutes at room temperature.

4. Briefly vortex the tube and then do a quick spin (less than 5000xg) to concentrate the liquid

at the bottom.

5. Store the suspended plasmid at -20°C. The DNA is stable for at least one year from date of

shipping when stored at -20°C.

RefSeq: <u>NM 001761.2</u>

RefSeq Size:4287 bpRefSeq ORF:2361 bp

Locus ID: 899

UniProt ID: P41002
Cytogenetics: 16p13.3

Domains: F-box, cyclin_C, CYCLIN, cyclin

Protein Families: Druggable Genome

MW: 87.6 kDa

Gene Summary: This gene encodes a member of the cyclin family. Cyclins are important regulators of cell cycle

transitions through their ability to bind and activate cyclin-dependent protein kinases. This member also belongs to the F-box protein family which is characterized by an approximately 40 amino acid motif, the F-box. The F-box proteins constitute one of the four subunits of the

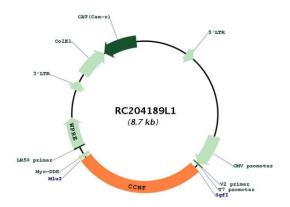

ubiquitin protein ligase complex called SCFs (SKP1-cullin-F-box), which function in

phosphorylation-dependent ubiquitination. The F-box proteins are divided into 3 classes: Fbws containing WD-40 domains, Fbls containing leucine-rich repeats, and Fbxs containing either different protein-protein interaction modules or no recognizable motifs. The protein encoded by this gene belongs to the Fbxs class and it was one of the first proteins in which

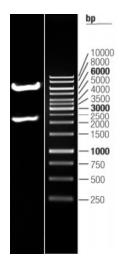

the F-box motif was identified. [provided by RefSeq, Jul 2008]
