BIGM103 (SLC39A8) (NM_022154) Human Tagged ORF Clone Lentiviral Particle

Product data:

Product Type: Lentiviral Particles

Product Name: BIGM103 (SLC39A8) (NM 022154) Human Tagged ORF Clone Lentiviral Particle

Symbol: BIGM103

Synonyms: BIGM103; CDG2N; LZT-Hs6; PP3105; ZIP8

Mammalian Cell

Selection:

None

Vector: pLenti-C-mGFP (PS100071)

Tag: mGFP

ACCN: NM_022154 **ORF Size:** 1380 bp

ORF Nucleotide

The ORF insert of this clone is exactly the same as(RC204200).

Sequence:

OTI Disclaimer: The molecular sequence of this clone aligns with the gene accession number as a point of

reference only. However, individual transcript sequences of the same gene can differ through naturally occurring variations (e.g. polymorphisms), each with its own valid existence. This clone is substantially in agreement with the reference, but a complete review of all prevailing

variants is recommended prior to use. More info

OTI Annotation: This clone was engineered to express the complete ORF with an expression tag. Expression

varies depending on the nature of the gene.

RefSeg: NM 022154.5, NP 071437.3

 RefSeq Size:
 3309 bp

 RefSeq ORF:
 1383 bp

 Locus ID:
 64116

 UniProt ID:
 Q9C0K1

 Cytogenetics:
 4q24

Domains: Zip

Protein Families: Transmembrane

ORIGENE

MW: 49.5 kDa

Gene Summary:

This gene encodes a member of the SLC39 family of solute-carrier genes, which show structural characteristics of zinc transporters. The encoded protein is glycosylated and found in the plasma membrane and mitochondria, and functions in the cellular import of zinc at the onset of inflammation. It is also thought to be the primary transporter of the toxic cation cadmium, which is found in cigarette smoke. Multiple transcript variants encoding different isoforms have been found for this gene. Additional alternatively spliced transcript variants of this gene have been described, but their full-length nature is not known. [provided by RefSeq, Oct 2008]
