| OTI Disclaimer:              | The molecular sequence of this clone aligns with the gene accession number as a point of reference only. However, individual transcript sequences of the same gene can differ through naturally occurring variations (e.g. polymorphisms), each with its own valid existence. This clone is substantially in agreement with the reference, but a complete review of all prevailing variants is recommended prior to use. <u>More info</u> |
| OTI Annotation:              | This clone was engineered to express the complete ORF with an expression tag. Expression varies depending on the nature of the gene.  |

Gene Summary:This gene encodes a protein that associates with the nuclear pore complex and participates<br/>in the regulation of nuclear transport. The encoded protein interacts with Ras-related nuclear<br/>protein 1 (RAN) and regulates guanosine triphosphate (GTP)-binding and exchange.<br/>Alternative splicing results in multiple transcript variants.
