OTI Disclaimer:	Due to the inherent nature of this plasmid, standard methods to replicate additional amounts of DNA in E. coli are highly likely to result in mutations and/or rearrangements. Therefore, OriGene does not guarantee the capability to replicate this plasmid DNA. Additional amounts of DNA can be purchased from OriGene with batch-specific, full-sequence verification at a reduced cost. Please contact our customer care team at <u>custsupport@origene.com</u> or by calling 301.340.3188 option 3 for pricing and delivery.
	The molecular sequence of this clone aligns with the gene accession number as a point of reference only. However, individual transcript sequences of the same gene can differ through naturally occurring variations (e.g. polymorphisms), each with its own valid existence. This clone is substantially in agreement with the reference, but a complete review of all prevailing variants is recommended prior to use. <u>More info</u>
OTI Annotation:	This clone was engineered to express the complete ORF with an expression tag. Expression varies depending on the nature of the gene.
Components:	The ORF clone is ion-exchange column purified and shipped in a 2D barcoded Matrix tube containing 10ug of transfection-ready, dried plasmid DNA (reconstitute with 100 ul of water).
Reconstitution Meth	 1. Centrifuge at 5,000xg for 5min. 2. Carefully open the tube and add 100ul of sterile water to dissolve the DNA. 3. Close the tube and incubate for 10 minutes at room temperature. 4. Briefly vortex the tube and then do a quick spin (less than 5000xg) to concentrate the liquid at the bottom. 5. Store the suspended plasmid at -20°C. The DNA is stable for at least one year from date of shipping when stored at -20°C.

CD27 (NM_001242) Human Tagged Lenti ORF Clone – RC204252L1

Gene Summary:The protein encoded by this gene is a member of the TNF-receptor superfamily. This receptor
is required for generation and long-term maintenance of T cell immunity. It binds to ligand
CD70, and plays a key role in regulating B-cell activation and immunoglobulin synthesis. This
receptor transduces signals that lead to the activation of NF-kappaB and MAPK8/JNK. Adaptor
proteins TRAF2 and TRAF5 have been shown to mediate the signaling process of this receptor.
CD27-binding protein (SIVA), a proapoptotic protein, can bind to this receptor and is thought
to play an important role in the apoptosis induced by this receptor. [provided by RefSeq, Jul
2008]
