Gene Summary:This gene belongs to the solute carrier 2A family, which includes intracellular glucose
transporters. Based on sequence comparison, the glucose transporters are grouped into
three classes and this gene is a member of class II. The encoded protein, like other members
of the family, contains several conserved residues and motifs and 12 transmembrane
domains with both amino and carboxyl ends being on the cytosolic side of the membrane.
Alternatively spliced transcript variants have been described for this gene. [provided by
RefSeq, Nov 2012]
