ORIGENE Syntaxin 16 (STX16) (NM_003763) Human Tagged ORF Clone Lentiviral Particle – RC204347L4V	
Protein Pathways:	SNARE interactions in vesicular transport
MW:	34.8 kDa
Gene Summary:	This gene encodes a protein that is a member of the syntaxin or t-SNARE (target-SNAP receptor) family. These proteins are found on cell membranes and serve as the targets for V-SNARES (vesicle-SNAP receptors) permitting specific synaptic vesicle docking and fusion. A microdeletion in the region of chromosome 20 where this gene is located has been associated with pseudohypoparathyroidism type lb. Multiple transcript variants have been found for this gene. Read-through transcription also exists between this gene and the neighboring downstream aminopeptidase-like 1 (NPEPL1) gene. [provided by RefSeq, Mar 2011]
