NUP93 (NM 014669) Human Tagged ORF Clone Lentiviral Particle

Product data:

Product Type: Lentiviral Particles

Product Name: NUP93 (NM_014669) Human Tagged ORF Clone Lentiviral Particle

Symbol: NIC96 Synonyms: **Mammalian Cell**

Selection:

None

Vector: pLenti-C-mGFP (PS100071)

mGFP Tag:

NM 014669 ACCN: **ORF Size:** 2457 bp

ORF Nucleotide

Sequence:

The ORF insert of this clone is exactly the same as(RC204402).

OTI Disclaimer: The molecular sequence of this clone aligns with the gene accession number as a point of reference only. However, individual transcript sequences of the same gene can differ through naturally occurring variations (e.g. polymorphisms), each with its own valid existence. This

clone is substantially in agreement with the reference, but a complete review of all prevailing

variants is recommended prior to use. More info

OTI Annotation: This clone was engineered to express the complete ORF with an expression tag. Expression

varies depending on the nature of the gene.

NM 014669.2, NP 055484.2 RefSeq:

RefSeq Size: 2922 bp RefSeq ORF: 2460 bp Locus ID: 9688 **UniProt ID:** Q8N1F7

Cytogenetics: 16q13 **Domains:** NIC

MW: 93.6 kDa

Gene Summary:

The nuclear pore complex is a massive structure that extends across the nuclear envelope, forming a gateway that regulates the flow of macromolecules between the nucleus and the cytoplasm. Nucleoporins are the main components of the nuclear pore complex in eukaryotic cells. This gene encodes a nucleoporin protein that localizes both to the basket of the pore and to the nuclear entry of the central gated channel of the pore. The encoded protein is a target of caspase cysteine proteases that play a central role in programmed cell death by apoptosis. Alternative splicing results in multiple transcript variants encoding different isoforms. [provided by RefSeq, Dec 2016]
