

Product datasheet for RC204418L2

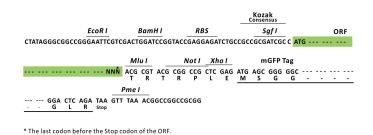

NUP62 (NM_012346) Human Tagged Lenti ORF Clone

Product data:

OriGene Technologies, Inc.

9620 Medical Center Drive, Ste 200 Rockville, MD 20850, US Phone: +1-888-267-4436 https://www.origene.com techsupport@origene.com EU: info-de@origene.com CN: techsupport@origene.cn

Product Type:	Expression Plasmids	
Product Name:	NUP62 (NM_012346) Human Tagged Lenti ORF Clone	
Tag:	mGFP	
Symbol:	NUP62	
Synonyms:	IBSN; p62; SNDI	
Mammalian Cell Selection:	None	
Vector:	pLenti-C-mGFP (PS100071)	
E. coli Selection:	Chloramphenicol (34 ug/mL)	
ORF Nucleotide Sequence:	The ORF insert of this clone is exactly the same as(RC204418).	
Restriction Sites:	Sgfl-Mlul	
Cloning Scheme:		
	Cloning sites used for ORF Shuttling:	
	Sgf I ORF Mlu I GCG ATC GC ATG // NNN ACG CGT	
	Sgf I ORF Mlu I	

ACCN: ORF Size: NM_012346 1566 bp

	NUP62 (NM_012346) Human Tagged Lenti ORF Clone – RC204418L2
OTI Disclaimer:	Due to the inherent nature of this plasmid, standard methods to replicate additional amounts of DNA in E. coli are highly likely to result in mutations and/or rearrangements. Therefore, OriGene does not guarantee the capability to replicate this plasmid DNA. Additional amounts of DNA can be purchased from OriGene with batch-specific, full-sequence verification at a reduced cost. Please contact our customer care team at <u>custsupport@origene.com</u> or by calling 301.340.3188 option 3 for pricing and delivery.
	The molecular sequence of this clone aligns with the gene accession number as a point of reference only. However, individual transcript sequences of the same gene can differ through naturally occurring variations (e.g. polymorphisms), each with its own valid existence. This clone is substantially in agreement with the reference, but a complete review of all prevailing variants is recommended prior to use. <u>More info</u>
OTI Annotation:	This clone was engineered to express the complete ORF with an expression tag. Expression varies depending on the nature of the gene.
Components:	The ORF clone is ion-exchange column purified and shipped in a 2D barcoded Matrix tube containing 10ug of transfection-ready, dried plasmid DNA (reconstitute with 100 ul of water).
Reconstitution Me	 2. Centrifuge at 5,000xg for 5min. 2. Carefully open the tube and add 100ul of sterile water to dissolve the DNA. 3. Close the tube and incubate for 10 minutes at room temperature. 4. Briefly vortex the tube and then do a quick spin (less than 5000xg) to concentrate the liquid at the bottom. 5. Store the suspended plasmid at -20°C. The DNA is stable for at least one year from date of shipping when stored at -20°C.
RefSeq:	<u>NM 012346.4, NP 036478.2</u>
RefSeq Size:	3241 bp
RefSeq ORF:	1569 bp
Locus ID:	23636
UniProt ID:	<u>P37198</u>
Cytogenetics:	19q13.33
Domains:	Nsp1_C
Protein Families:	Druggable Genome, Transcription Factors
MW:	53.3 kDa

Section 2012 Comparison of the section of the secti

Gene Summary:

The nuclear pore complex is a massive structure that extends across the nuclear envelope, forming a gateway that regulates the flow of macromolecules between the nucleus and the cytoplasm. Nucleoporins are the main components of the nuclear pore complex in eukaryotic cells. The protein encoded by this gene is a member of the FG-repeat containing nucleoporins and is localized to the nuclear pore central plug. This protein associates with the importin alpha/beta complex which is involved in the import of proteins containing nuclear localization signals. Multiple transcript variants of this gene encode a single protein isoform. [provided by RefSeq, Jul 2008]
