CARKL (SHPK) (NM_013276) Human Tagged Lenti ORF Clone

Product data:

Product Type: Expression Plasmids

Product Name: CARKL (SHPK) (NM_013276) Human Tagged Lenti ORF Clone

Tag: mGFP Symbol: CARKL

Synonyms: CARKL; SHK

Mammalian Cell Puromycin

Selection:

Vector: pLenti-C-mGFP-P2A-Puro (PS100093)

E. coli Selection: Chloramphenicol (34 ug/mL)

ORF Nucleotide The ORF insert of this clone is exactly the same as(RC204421).

Sequence:

Restriction Sites: Sgfl-Mlul

Cloning Scheme:

 $[\]ensuremath{^*}$ The last codon before the Stop codon of the ORF.

ACCN: NM_013276

ORF Size: 1434 bp

CARKL (SHPK) (NM_013276) Human Tagged Lenti ORF Clone - RC204421L4

OTI Disclaimer: The molecular sequence of this clone aligns with the gene accession number as a point of

reference only. However, individual transcript sequences of the same gene can differ through naturally occurring variations (e.g. polymorphisms), each with its own valid existence. This clone is substantially in agreement with the reference, but a complete review of all prevailing

variants is recommended prior to use. More info

OTI Annotation: This clone was engineered to express the complete ORF with an expression tag. Expression

varies depending on the nature of the gene.

Components: The ORF clone is ion-exchange column purified and shipped in a 2D barcoded Matrix tube

containing 10ug of transfection-ready, dried plasmid DNA (reconstitute with 100 ul of water).

Reconstitution Method: 1. Centrifuge at 5,000xg for 5min.

2. Carefully open the tube and add 100ul of sterile water to dissolve the DNA.

3. Close the tube and incubate for 10 minutes at room temperature.

4. Briefly vortex the tube and then do a quick spin (less than 5000xg) to concentrate the liquid

at the bottom.

5. Store the suspended plasmid at -20°C. The DNA is stable for at least one year from date of

shipping when stored at -20°C.

RefSeq: <u>NM 013276.2</u>

 RefSeq Size:
 3838 bp

 RefSeq ORF:
 1437 bp

 Locus ID:
 23729

 UniProt ID:
 Q9UHJ6

 Cytogenetics:
 17p13.2

Domains: FGGY

Protein Families: Druggable Genome

MW: 51.5 kDa

Gene Summary: The protein encoded by this gene has weak homology to several carbohydrate kinases, a class

of proteins involved in the phosphorylation of sugars as they enter a cell, inhibiting return

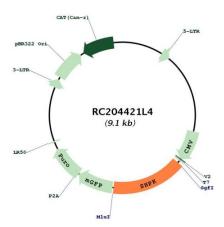

across the cell membrane. Sequence variation between this novel gene and known

carbohydrate kinases suggests the possibility of a different substrate, cofactor or changes in kinetic properties distinguishing it from other carbohydrate kinases. The gene resides in a region commonly deleted in cystinosis patients, suggesting a role as a modifier for the cystinosis phenotype. The genomic region is also rich in Alu repetitive sequences, frequently

involved in chromosomal rearrangements. [provided by RefSeq, Jul 2008]
