Product datasheet for RC204447L2V

MICA (NM_000247) Human Tagged ORF Clone Lentiviral Particle

Product data:

| Product Type: | Lentiviral Particles |
|------------------------------|---|
| Product Name: | MICA (NM_000247) Human Tagged ORF Clone Lentiviral Particle |
| Symbol: | MICA |
| Synonyms: | MIC-A; PERB11.1 |
| Mammalian Cell Selection: | None |
| Vector: | pLenti-C-mGFP (PS100071) |
| Tag: | mGFP |
| ACCN: | NM_000247 |
| ORF Size: | 1149 bp |
| ORF Nucleotide Sequence: | The ORF insert of this clone is exactly the same as(RC204447). |
| OTI Disclaimer: | The molecular sequence of this clone aligns with the gene accession number as a point of reference only. However, individual transcript sequences of the same gene can differ through naturally occurring variations (e.g. polymorphisms), each with its own valid existence. This clone is substantially in agreement with the reference, but a complete review of all prevailing variants is recommended prior to use. <u>More info</u> |
| OTI Annotation: | This clone was engineered to express the complete ORF with an expression tag. Expression varies depending on the nature of the gene. |
| RefSeq: | <u>NM 000247.1</u> |
| RefSeq Size: | 1410 bp |
| RefSeq ORF: | 1152 bp |
| Locus ID: | 100507436 |
| UniProt ID: | <u>Q29983</u> |
| Cytogenetics: | 6p21.33 |
| Domains: | MHC_I, IGc1 |
| MW: | 42.9 kDa |
| | |

Gene Summary: This gene encodes the highly polymorphic major histocompatability complex class I chainrelated protein A. The protein product is expressed on the cell surface, although unlike canonical class I molecules it does not seem to associate with beta-2-microglobulin. It is a ligand for the NKG2-D type II integral membrane protein receptor. The protein functions as a stress-induced antigen that is broadly recognized by intestinal epithelial gamma delta T cells. Variations in this gene have been associated with susceptibility to psoriasis 1 and psoriatic arthritis, and the shedding of MICA-related antibodies and ligands is involved in the progression from monoclonal gammopathy of undetermined significance to multiple myeloma. Alternative splicing of this gene results in multiple transcript variants. [provided by RefSeq, Jan 2014]
